ANNOUNCEMENT

The subject index to this issue of the Bibliography of Agriculture was prepared by permuting the subject entries originally assigned to each citation.

The purpose of permuting the entries was to obtain additional points of access to the information and to increase the specificity of information under each entry.

The above action is one more instance of the use of computers to increase the accessibility of information in the National Agricultural Library.

BIBLIOGRAPHY OF AGRICULTURE

Vol. 33

September 1969

No. 10

The Bibliography of Agriculture is an index to the literature of agriculture and the allied sciences received in the National Agricultural Library. Publications from any country are indexed, provided they are in one of the languages shown in CAPITALS at top of next column, or have summaries, abstracts, or translated titles in one of those languages.

Literature received more than one year after publication is generally not indexed. Exceptions are made for important scientific publications.

Indexing of articles on the processing of agricultural products is limited to those on primary processing.

Unsigned articles and those signed with pseudonyms or initials, editorials, letters to the editor, and columns appearing regularly, are omitted.

For more detailed coverage of the literature on pests and their control, please consult the Pesticides Documentation Bulletin, a biweekly publication of the National Agricultural Library.

FORMAT

The Bibliography is a classified arrangement of references under the following subjects:

- USDA Publications
- State Agricultural Experiment Station Publications
- State Agricultural Extension Service Publications
- Agricultural Economics and Rural Sociology
- Agricultural Products
- Animal Industry
- Engineering
- Entomology
- Food and Human Nutrition
- Forestry
- Plant Science
- Soils and Fertilizers
- Miscellaneous

The classified section is followed by the listing of:

- New Periodicals and Serials
- Translations
- Food and Agriculture Organization of the United Nations (FAO) Publications

The last section of each monthly issue, except November, is the Author and subject index for that issue.

For monographs the title is shown in the original language, followed by the English version. Titles of foreign language articles in serial publications are given in English only; the language of the text is shown in abbreviated form in parentheses at the end of the title. The following notations are used:

(Af)	Afrikaans	(Ic)	Icelandic
(Al)	Albanian	(In)	Indonesian
(Ara)	Arabic	(It)	ITALIAN
(Arm)	Armenian	(Ja)	JAPANESE
(Az)	Azerbaijani	(Ka)	Kazakh
(Be)	Belorussian	(Ko)	KOREAN
(Bu)	Bulgarian	(La)	Latvian
(Bur)	Burmese	(Li)	Lithuanian
(Ch)	CHINESE	(No)	Norwegian
(Cz)	CZECH	(Pe)	Persian
(Da)	Danish	(Pol)	POLISH
(Du)	DUTCH	(Por)	PORTUGUESE
(Es)	Estonian	(Rum)	Rumanian
(Fi)	Finnish	(Rus)	RUSSIAN
(Fl)	Flemish	(Se)	SERBO-CROATIAN
(Fr)	FRENCH	(Si)	Siamese
(Ge)	GERMAN	(Sl)	Slovenian
(Geo)	Georgian	(Sp)	SPANISH
(Gre)	GREEK	(Sw)	Swedish
(He)	Hebrew	(Ta)	Tadzhik
(Hi)	Hindi	(Tu)	TURKISH
(Hu)	HUNGARIAN	(Uk)	UKRAINIAN

Abbreviated names of the publications cited prior to July 1, 1964 are those from USDA Miscellaneous Publication 765-List of Serials Currently Received in the Library of the United States Department of Agriculture, July 1, 1957. Abbreviated names of all new periodical titles received after July 1, 1964 are taken from the American Standard for Periodical Title Abbreviations. As time allows, abbreviations set up for titles before that date will be converted to the new form.

The presence of the term "Ref." in the citation indicates that the article contains ten or more references to the literature.

Following each citation is the Library classification number which should be used when requesting loans or reproduction of articles.

FREQUENCY OF PUBLICATION

The Bibliography is published monthly. The December issue is devoted wholly to a subject index and the cumulated Personal and Organizational index to the preceding eleven issues.

AVAILABILITY OF REFERENCES CITED

Loans

Most of the material in the National Agricultural Library collection may be borrowed by employees of the Department of Agriculture and by other libraries. In requesting loans, please include the library call number found at the end of the citation. Loan of periodicals is restricted to the Washington, D. C. area. Foreign statistical publications and rare books are loaned only by special arrangement.

Free Distribution

U.S.D.A. publications. Domestic requests for publications of the United States Department of Agriculture will be filled free to libraries and other qualified agencies and organizations, as long as the supply lasts. (For ordering information, see Checklist of U.S.D.A. Publications in this issue.) Foreign institutions, organizations and agencies which issue publications may obtain U.S.D.A. publications in exchange by writing to the United States Department of Agriculture, National Agricultural Library, Exchange Unit, Washington, D. C., 20250.

State Agricultural Experiment Station and Extension Service publications. Publications issued by State Agricultural Experiment Stations and Extension Services are available except where noted, and as long as the supply lasts, from the issuing station or service. The National Agricultural Library does not distribute them; however, reproductions are available at regular Library rates.

Technical Reports

Most documents issued by CFSTI (Clearinghouse for Federal Scientific and Technical Information) are also sold by the Clearinghouse, U. S. Department of Commerce, Springfield, Virginia 22151 for \$3.00 per document.

Reproduction

All articles listed may be obtained in microfilm or photoprint form from the United States Department of Agriculture, National Agricultural Library, Exchange Section, Beltsville, Maryland, 20705. Copying charges for each periodical or book are:

MICROFILMS: \$1.00 for each 30 pages or fraction copied from a single article or book.

PHOTOPRINTS: \$1.00 for each 4 pages or fraction copied from a single article or book.

RUSH SERVICE: Will be furnished upon payment of \$1.00 additional for each order.

Payment must accompany the order. Cash, Library coupons, check or money order drawn to the National Agricultural Library, U. S. D. A., are acceptable. Payment for orders originating outside of the United States should be made by international money order or draft on an American bank, or by UNESCO book coupons. Superintendent of Documents coupons and requests to furnish photocopy to be paid from Superintendent of Documents Deposit funds cannot be honored. Credit may be extended only to Government agencies and institutions. Billing address should be indicated.

Library Coupons

National Agricultural Library coupons, valued at \$1.00 each, may be purchased in any quantity.

PLEASE GIVE COMPLETE BIBLIOGRAPHIC INFORMATION (INCLUDING CALL NUMBER)
AS IT APPEARS IN THIS PUBLICATION FOR EACH ITEM REQUESTED.

For sale by the Superintendent of Documents, U. S. Government Printing Office, Washington, D. C., 20402
\$26.50 per year, domestic; \$33.25 per year, foreign. Single copies vary in price.

Use of funds for printing this publication approved by the Director of the Bureau of the Budget (March 31, 1964)

CHECKLISTS

Checklists of publications of the U. S. D. A., State Agricultural Experiment Stations, and State Agricultural Extension Services are prepared for the convenience of those who wish to follow the literature from these sources. Most of these publications are included also in the classified section. All are indexed in the author and subject indexes.

Abstracts are included with citations of U. S. D. A. publications, provided they are brief and are received with the original publication.

U. S. D. A. PUBLICATIONS

Publications in the various United States Department of Agriculture series are listed first, followed by publications issued by the various agencies within the Department, arranged alphabetically by name of agency.

Domestic requests for publications in the various Department series will be filled free to libraries and other qualified agencies and organizations upon application to the United States Department of Agriculture, Office of Information, Washington, D.C., 20250, as long as the supply lasts. They may also be purchased from the Superintendent of Documents, Washington, D.C., 20250.

Domestic requests for most publications issued by the Department will be filled free by the issuing agency, as long as the supply lasts. Requests should be addressed to the United States Department of Agriculture, name of the specific issuing agency, Washington, D.C., 20250.

Foreign governments, institutions and agencies which issue publications, may obtain United States Department of Agriculture publications in exchange by writing to the United States Department of Agriculture, National Agricultural Library, Exchange, Section, Beltsville, Md., 20705.

For further information about the availability of United States Department of Agriculture publications, consult U.S.D.A. List Number 11, List of Available Publications of the United States Department of Agriculture, obtainable from the United States Department of Agriculture, Office of Information, Washington, D.C., 20250, and for sale by the Superintendent of Documents, Washington, D.C., 20402.

COST AND PERFORMANCE OF POLYSTYRENE
BOXES FOR SHIPPING ICE-PACKED POULTRY.
U. S. D. A. Marketing Res. Rep. 833, 8 p. Jan. 1969.
1 Ag84Mr

Polystyrene foam boxes were developed and tested for shipping ice-packed poultry. Six test truck shipments were made. Although polystyrene foam boxes cost more than wooden boxes, a potential net saving of approximately 4.2 cents per hundredweight can be achieved by packing and shipping ice-packed poultry in polystyrene boxes. This saving results from lower costs of transport, lower costs of package ice, and lower costs of labor for packing and loading polystyrene boxes than for wooden boxes. The lighter weight of the polystyrene boxes and the reduced amount of package ice permits loading more poultry in a truck before the truck reaches legal load limits.

Warehouse receivers and retail butchers liked the polystyrene boxes because they were sanitary and easy to handle, to open, and to empty. But the polystyrene boxes were not so sturdy as the wirebound boxes. Sometimes they broke during transit and when they were not handled carefully.

G. B. Rogers, D. B. Agnew, and L. Dueser,
joint authors.

Three general forms of soy proteins are used in foods: Soy flour and grits, soy concentrates, and soy isolates. Each of these forms may be used as a component in the formulation of comminuted meat, health, and diet food products. Most food uses of these proteins are for functional as well as nutritional purposes. Federal standards of identity limit the level of use in comminuted meat products, and meat analog products must be labeled as to composition. As yet, it is too early to evaluate the complete impact these synthetic products will have on the meat and poultry market, which may be the largest potential food market for soy protein.

SUBSTITUTES FOR LEATHER. U. S. D. A. Misc. Publ. 1141:49-52. Apr. 1969. 1 Ag84M
Domestic demand for cattle hides has been relatively constant at 22 to 24 million pieces annually since 1958, but it is expected to decline to 21 million pieces by 1980. Currently, there are 69 leather substitutes available, all but 17 of which sell for less than leather. Most of the substitutes have a property superior to leather such as lighter weight, scuff resistance, or dye fastness. Domestic cattle hide availability is expected to increase from 34 million pieces in 1965 to 46 million in 1980 with a hide surplus of 27 million pieces. Because of substitute materials at lower prices, exporting large numbers of hides does not appear feasible. Thus, expanding existing markets for leather and finding new and non-conventional outlets for hides, as in food uses, appear to be the most promising means of improving markets for hides.

PROTEIN FROM PETROLEUM. U. S. D. A. Misc. Publ. 1141:82-85. Ref. Apr. 1969. 1 Ag84M
The use of single-cell organisms to synthesize protein from petroleum fractions is technically feasible. Pilot scale production and trial feedings have been accomplished in the United States and several foreign countries. The first market visualized for protein from petroleum is the animal feed industry. In this market, protein from petroleum must compete on a cost basis with protein from agricultural products such as soybean meals. The impact of the production of protein from petroleum on domestic oilseed meal markets will be limited until production costs are reduced and extensive toxicity testing has been completed.

AGRICULTURAL RESEARCH SERVICE

- 54721 Trujillo, E. E., and Obrero, F. P. ANTHRACNOSE OF PAPAYA LEAVES CAUSED BY COLLETOTRICHUM GLOEOPORIOIDES. Plant Dis. Rep. 53(5):323-325. May 1969. 1.9 P69P
Colletotrichum gloeoporioides was found to cause a leaf spot of papaya which closely resembled necrotic symptoms of magnesium deficiency. Disease severity was variable within the Solo variety of papaya but also increased with higher levels of soil pH. These two factors were the determinants of disease severity during wet periods favorable for disease development.
- 54722 Wysong, D. S., and Kerr, E. HYBRID CORN YIELD REDUCTION BY STALK AND ROOT ROT IN NEBRASKA. Plant Dis. Rep. 53(5):326-329. May 1969. 1.9 P69P
Yield losses attributed to corn stalk and root rot were determined in 48 farmers' fields in 18 counties in Nebraska during the fall of 1968. Differences in shelled grain weight between standing-diseased and adjacent healthy plants were used to calculate yield reductions on an individual diseased plant basis. Statistically significant losses averaged 34.97 per cent in 420 of 480 paired comparisons and ranged from 12.3 per cent to 51.3 per cent in the fields sampled. By using these data in relation to the incidence of disease, statewide yield losses were estimated to be 11.04 per cent. Based on the current 7-year average for corn grain production, Nebraska farmers would have realized an increase of 7.9 bushels more per acre, valued at approximately 39,947,770 to the State's Economy, in the absence of stalk rot.
- 54723 Palmiter, D. H. A TRANSMISSIBLE FRUIT-DEPRESSION DISEASE OF MCINTOSH APPLES. Plant Dis. Rep. 53(5):329-332. May 1969. 1.9 P69P
An apparently new virus disease causing a foliage mosaic and a serious fruit deformity in the form of irregular depressions on McIntosh apples as described. The reactions of several other apple varieties to graft inoculations of this isolate differed from those of two apple mosaic isolates. McIntosh depression virus is suggested as the common name for this disease.
- 54724 Roistacher, C. N., Calavan, E. C., and Blue, R. L. CITRUS EXOCORTIS VIRUS—CHEMICAL INACTIVATION ON TOOLS, TOLERANCE TO HEAT AND SEPARATION OF ISOLATES. Plant Dis. Rep. 53(5):333-336. May 1969. 1.9 P69P
Exocortis virus was readily transmitted by contaminated knife blades and fingers. Mechanical transmission by knife cuts was prevented by a 1-second dip of the contaminated blades in diluted household bleach or a solution of 2 per cent sodium hydroxide plus 2 per cent formalin. Heating contaminated blades for 4 to 6 seconds in the flame of a propane torch or flaming blades dipped in 95 per cent alcohol failed to inactivate the virus. A 1-second dip in the following chemical suspensions or solutions also failed to prevent transmission: 20 per cent phisohex, 3 per cent formalin, 2 per cent trisodium phosphate cleaner, 10 per cent borax, 1 per cent lysol and 95 per cent ethyl alcohol. A 20 per cent household bleach solution (containing about 1 per cent sodium hypochlorite) is recommended as a disinfectant for pruning and grafting tools. The corrosive action of the bleach on tools was avoided by dipping in a mixture of vinegar, water, and emulsifiable oil. Mild isolates of exocortis virus were separated from severe isolates by knife transmissions.
- 54725 Schwarz, R. E., and McClean, A. P. D. GUM-POCKET, A NEW VIRUS-LIKE DISEASE OF PONCIRUS TRIFOLIATA. Plant Dis. Rep. 53(5):336-339. May 1969. 1.9 P69P
A new disease characterized by gum pockets and malformation of the trunks was found in trifoliolate orange rootstocks under sweet orange scions. The disease, which leads to severe stunting and decline within 5 years, is thought to be of virus origin. Its symptoms are different from those produced in the trifoliolate orange by the other citrus viruses.

Abstract, p.345.
- 54728 Berkenkamp, B., Folkins, L., and Meeres, J. FLORAL INFECTION BY ASCOCHYTA CAULICOLA (GRAY STEEM CANKER) AND VARIETAL REACTION OF SWEET CLOVER. Plant Dis. Rep. 53(5):348-349. May 1969. 1.9 P69P
In July 1968 a striking floral manifestation of *Ascochyta caulicola* was observed on sweet clover. The seed yield was reduced to 5 per cent of that expected in a susceptible variety. Disease ratings on varieties were closely correlated with percentage of seed carrying the fungus.
- 54729 Prasad, K., and Weigle, J. L. RESISTANCE TO RHIZOCTONIA SOLANI IN PHASEOLUS VULGARIS (SNAP BEAN). Plant Dis. Rep. 53(5):350-352. May 1969. 1.9 P69P
Among several Plant Introduction accessions and bean cultivars evaluated for resistance to *Rhizoctonia solani*, Venezuela 54 and PI 165426 had the highest level of resistance. Valentine was rated as the most resistant cultivar. Several factors appear to be associated with the resistant response to the pathogen. Resistant lines had purple hypocotyls and black seed coats that adhered tightly to the cotyledon without cracking readily. Post infectious studies indicate that low amino-acid content in the hypocotyl of resistant hosts may be partly responsible for the poor growth of the pathogen. Pathogenesis also appeared to be retarded by the production of secondary substances in resistant hosts. There was no indication of root inhibition in inoculated plants.
- 54730 Singh, D. V., Khanna, B. M., and Khanna, A. N. FIELD EVALUATION OF SOME FUNGICIDES FOR CONTROL OF LEAF AND STEM RUSTS OF WHEAT. Plant Dis. Rep. 53(5):352-355. Ref. May 1969. 1.9 P69P
Field trials were conducted for 3 years with eight fungicides for the control of leaf and stem rusts of wheat at Kanpur, India. Both rusts were effectively controlled by five sprays of nickel sulfate + maneb and maneb at the rate of 2.5 lb/acre per spray, with corresponding increase in yield. Other fungicides tested also reduced intensity of rusts significantly but were inferior to the two fungicides mentioned. The highest net profit per hectare was obtained by application of maneb.

POSTHARVEST HEAT TREATMENT TO CONTROL STORAGE ROTTS OF SPADONA PEARS. Plant Dis. Rep. 53(5):363-367. Ref. May 1969. 1.9 P69P
Postharvest hot-water treatment at 47°C for 7 minutes effectively controlled Alternaria tenuis rot in inoculated Spadona pears, but was not effective against rots caused by Penicillium expansum and Botrytis cinerea. The treatment enhanced the development of P. expansum on noninoculated fruits during 6 months' storage. Treatment at 50° had some effect against P. expansum and B. cinerea, but caused skin injuries to the fruit.

DIRECT ISOLATION OF CYLINDROCLADIUM FLORIDANUM FROM SOIL. Plant Dis. Rep. 53(5):367-369. May 1969. 1.9 P69P
Coniferae.
Viable microsclerotia of Cylindrocladium floridanum were recovered from soil from a naturally infested forest tree nursery in Minnesota, but by using soil sieves to concentrate the propagules, C. floridanum was also successfully isolated directly from the screened soil by a soil dilution plate method. Colonies of C. floridanum on the dilution plates originated from viable microsclerotia occurring as essentially free units in the soil.

OCCURRENCE OF CRONARTIUM COMP-TONIAE IN THE MARITIME PROVINCES. Plant Dis. Rep. 53(5):369-371. Ref. May 1969. 1.9 P69P
Sweetfern blister rust, caused by Cronartium complanatum Arth., is reported on associated exotic or native hard pines and sweetfern or sweet gale in the Maritime Provinces of Canada. In a shortleaf pine plantation, 82 per cent of the seedlings were infected, 71 per cent of which were dead. In lodgepole pine and jack pine plantations, 34 and 12 per cent, respectively, of the stems were infected. The occasional occurrence of a stem rust caused by Peridermium stalactiforme Arth. and Kern is also indicated by natural infections of cove-weat.

FROGEYE LEAFSPOT AND APPLE BLACK ROT CONTROL BY FUNGICIDE SPRAY TREATMENT IN NEW HAMPSHIRE. Plant Dis. Rep. 53(5):372-375. Ref. May 1969. 1.9 P69P
Frogeye leafspot and black rot of apples is a fungus disease caused by Physalospora obtusa (Schw.) Cooke. Frogeye leafspot was reduced significantly by folpet, captan, maneb, thiram and ferbam (in descending order of effectiveness) during three years of field tests. Fruit rot was only partially controlled in these trials. Folpet and captan provided consistently good control of both frogeye leafspot and apple rot. N-(1,1,2,2-tetrachloroethyl)sulfenyl)-cis-cyclohexene-1,2-dicarboximide, which was used only in 1968, appeared to be promising for further tests because it significantly reduced frogeye leafspot and completely controlled apple rot.

LONGIDORUS AFRICANUS A PATHOGEN OF HEAD LETTUCE IN THE IMPERIAL VALLEY OF SOUTHERN CALIFORNIA. Plant Dis. Rep. 53(5):381-384. May 1969. 1.9 P69P
J. W. Osgood, K. S. Mayberry, A. O. Paulus, and F. Shibuya, joint authors.
In the fall of 1967, Longidorus africanus Merny was found in soil around the roots of stunted lettuce seedlings in the Imperial Valley of southern California. Diseased seedlings appeared wilted and chlorotic and taproot tips were swollen and sometimes necrotic. Controlled greenhouse experiments proved L. africanus a pathogen of head lettuce. Field samplings during 1968 revealed the nematode was widespread throughout the valley and many crops such as cotton, sorghum, alfalfa, and sugarbeets will support large populations of this nematode in the field during the summer months when soil temperatures are extremely high. The pathogenicity of L. africanus to crops other than lettuce is unknown.
- 54742 Radewald, J. D., and others.
PREPLANT SOIL FUMIGATION FOR CALIFORNIA HEAD LETTUCE. Plant Dis. Rep. 53(5):385-389. May 1969. 1.9 P69P
P. G. Mowbray, A. O. Paulus, F. Shibuya, and J. M. Rible, joint authors.
Preplant bed fumigation of lettuce soils in the Pal Verde Valley of California with two 1,3-dichloropropene soil fumigants in three field trials significantly increased lettuce head weights. Treatments also produced trends toward a more uniform and earlier maturation of the crop; these differences, however, were not statistically significant. The nature of the beneficial response is not completely understood. Control of Tylenchorynchus clarus was associated with the beneficial response in two trials and Meloidogyne hapla in the other. Pathogenicity of T. clarus to lettuce is unproven. The distribution of M. hapla as a pathogen of head lettuce in this valley is also reported.

SURVEY, SCREENING, AND BREEDING FOR BACTERIAL BLIGHT RESISTANCE IN COTTON. Plant Dis. Rep. 53(5):390-391. May 1969. 1.9 P69P
Xanthomonas malvacearum.
Annual surveys are made in the cotton-producing areas of New Mexico and west Texas to determine the presence and distribution of bacterial blight. Leaf and boll samples are collected from infected plants. The collections are screened in the greenhouse on standard differentials to determine which races of the organisms are involved, where they occur, and whether variants of the known races are present. This information is of value to those involved in the resistance breeding program, and to growers who may modify variety choice by knowledge of the organism present.

A RACE OF USTILAGO TRITICI VIRULENT ON THATCHER WHEAT AND ITS DERIVATIVES. Plant Dis. Rep. 53(5):393-395. Ref. May 1969. 1.9 P69P
The wheat variety Thatcher, resistant to loose smut, Ustilago tritici (Pers.) Rostr., for over 30 years, was susceptible to a new race found in Alberta, Canada in 1966. The durum wheat variety lumilo, from which the smut resistance of Thatcher was derived, was also susceptible, but varieties such as Selkirk, that trace their resistance to Vernal Emmer, were resistant to the new race. The new race was collected from an increasingly larger area of western Canada in 1967 and 1968 and wider distribution is predicted in 1969. The origin of the new race, as a mutation to virulence in a pre-existing race prevalent on susceptible varieties grown in northern Alberta, is proposed.

THE IDENTITY OF PHYLLACTINIA ON
WINGED ELM IN GEORGIA. Plant Dis. Rep. 53(5):395-397. May 1969. 1.9 P69P
A powdery mildew on *Ulmus alata* is identified as *Phyllactinia angulata* (Salmon) Blumer, the first report of this species in Georgia.
- 54747 Aulakh, K. S.
ALTERNARIA BLIGHT OF GROUNDNUTS. Plant Dis. Rep. 53(5):397-398. May 1969. 1.9 P69P
Alternaria blight of groundnuts (*Arachis hypogaea*), a hitherto undescribed disease caused by *Alternaria tenuis* Auct., was found to be very destructive in some parts of the Punjab State during field surveys conducted in 1968.
- 54748 Aulakh, K. S., and Grover, R. K.
REACTION OF TOMATO VARIETIES AGAINST
ALTERNARIA SOLANI AND CLADOSPORIUM FULVUM. Plant Dis. Rep. 53(5):399. May 1969. 1.9 P69P
Of 41 varieties of tomato tested for their reaction against *Alternaria solani* and *Cladosporium fulvum*, 13 were found to be resistant to the former and 14 to the latter pathogen. Four varieties were resistant, and seven were susceptible, to both pathogens.
- 54749 Schnathorst, W. C.
DETECTABLE LEVELS OF XANTHOMONAS MALVACEARUM IN COTTON GIN DEBRIS WITH THE SEED-SOAK METHOD. Plant Dis. Rep. 53(5):400-402. May 1969. 1.9 P69P
Source for transmission to disease-free seed. The percentage of infection of cotton seedlings was related directly to the concentration of *Xanthomonas malvacearum* in suspensions in which the seed had been soaked. Single dried leaf lesions yielded an average of 5x10⁶ viable cells of *X. malvacearum*. When varying numbers of lesions were ground and incorporated into varying volumes of glass-distilled water, infection percentages, again, were related directly to the numbers of viable bacterial cells in suspension. The seed-soak method detected between 15,000 and 40,000 viable bacterial/ml of suspension. The number of viable bacteria in debris and level of contamination in a particular cotton gin can thus be approximated by the percentage of infection induced in cotton seedlings by soaking healthy seed in suspensions of contaminated gin debris.

SURVIVAL OF THE SOYBEAN CYST NEMATODE IN SEED STOCKS. Plant Dis. Rep. 53(5):403-405. May 1969. 1.9 P69P
Small balls of soil, or "peds," recovered from three seed sources contained cysts of the soybean cyst nematode (*Heterodera glycines* Ichinohe). Examination of three lots of natural peds showed that 1, 6, and 9 per cent of the peds contained only one cyst; however, as many as four were recovered from some peds. Five and 8 months after the peds were harvested with the seed, active larvae were observed; and the nematodes from all the lots had infected soybean roots.

POINT SAMPLING OF LAND USE IN THE WASHITA BASIN, OKLAHOMA. U. S. Agr. Res. Serv. ARS-41-149, 12 p., map. Apr. 1969. A56.9 R31
In 1962 a land use inventory of 1,130 square miles of the Washita Basin cost \$1,910. Since land use surveys may be made annually, a more economical method was needed. Point sampling was selected as the best method, with a stratified systematic unaligned type of sample as the most efficient. Tests of this type of sample showed it was about 3.5 times as efficient as random samples. A land use inventory made in 1967 based on a systematic sample cost \$470, and results were at least as accurate as the 1962 survey.

RELATIONSHIPS BETWEEN GRAIN TRANSIT LOSSES AND BOXCAR DEFECTS. U. S. Agr. Res. Serv. ARS-52-25, 13 p. Apr. 1969. A289.9 R31
Grain losses from defective car walls and floors could be reduced through better car maintenance and repair. The greater loss from paper grain doors than from wooden grain doors indicates a need to improve the design or method of installing paper doors. Also, the possibility of developing a more suitable door than the present wooden doors and paper doors should not be overlooked. In addition, work might be done to improve the construction of boxcar doorposts and adjacent areas so that these parts of the car can better withstand repeated nailings when grain doors are installed. Further study is needed to determine the feasibility of such improvements, and to compare their cost with the value of grain that might be saved.

EFFECTS OF VENT HOLES ON STRENGTH OF FIBERBOARD BOXES AND FRUIT COOLING RATE. U. S. Agr. Res. Serv. ARS-52-34, 12 p. Mar. 1969. A289.9 R31
Apples. This study is a continuation of the cooling research by Olsen, Patchen, and Schomer. In this study we used compression tests to determine the strength of fiberboard boxes. The strength of the boxes was affected very little as long as the vent holes were in the unstressed area away from the box corners. Most of the strength of the boxes is in the formed corners, where the angle formation limits bending. Half-cooling time was shortest for the box with the largest holes. It was only 14.8 hours compared with 33.2 hours for a standard fiberboard box without ventilation holes.

CONTROL OF BARLEY LOOSE SMUT BY AN 1,4-OXATHIIN DERIVATIVE. In Moseman, J. G. Fungicidal control of smut diseases of cereals, p.25-27. 1968. aSB608.G6M6
The systemic fungicide DCMO applied as a slurry seed treatment to an experimental line of winter barley (Tenn. 50-15), gave complete control of loose smut (*Ustilago nuda*) at 2 and 5 oz/bu. No adverse effects were obtained on seedling stand and plant growth using this compound at the 2 oz rate/bu. Another fungicide, TH-174F, applied at 5 oz/bu was phytotoxic and failed to control loose smut.

TECHNOLOGICAL CHANGE IN AGRICUL-
TURE. Agr. Econ. Res. 21(1):13-18. Ref. Jan. 1969.
1 Ec7Agr
1. Agriculture's index of technology increased
about 87 percent from 1950-52 to 1964-66. This indicates
that technology has had an average annual growth rate of
about 4.6 percent.
2. Gross output per man-hour more than
doubled, with between 62 and 80 percent of increase at-
tributed to technical change and between 20 and 38 per-
cent to increased capital intensity.
3. Capital has accounted for approximately 35
percent of the total output. This finding is consistent with
the findings of Douglas and Solow in their studies in the
nonagricultural sectors of our country.
4. Agriculture's aggregate production function,
corrected for technological change, shows a tendency to-
ward diminishing returns. This tendency, however, seems
to be very slight.
5. Farm machinery seems to play only a minor
direct role in agriculture's increased output.

THE DOMESTIC WOOL MARKETING SYSTEM.
U. S. D. A. Econ. Res. Serv. ERS-400, 68 p., map. Ref.
Mar. 1969. A281.9 Ag83E
During the past 20 years, the domestic wool in-
dustry declined in almost every phase of production, mar-
keting, and processing. The decline reflects, among other
things, lack of information on improving the quality and
preparation of wool clips—especially small ones—and on
effective pricing.
A survey in 1964-66 of producers, warehouse
operators, local pool directors, and major wool process-
ors showed that all segments of the industry had prob-
lems which had no easy solution. The survey information
did not always provide objective guides to solving these
problems, but alternative practices are suggested that
would permit each segment to take advantage of new
technology or combination of procedures in upgrading its
operations. These practices are outlined in detail in the
final section of the report; their use would help the wool
industry to improve its marketing practices, reduce the
total marketing bill, and deliver to processors the types
of wool required.

NEWS AND VIEWS OF THIS KILN DRYING BUSINESS; DIP TREATMENT IN POLYETHYLENE GLYCOL NOT EFFECTIVE IN PREVENTING SURFACE CHECKING. U. S. Forest Serv. Res. Note FPL-0204, 6 p. Feb. 1969. A99.9 F7634Un
Wisconsin University, cooperating.

Dipping green red oak boards in a nearly saturated polyethylene glycol solution was not effective in reducing surface checking. In fact the treatment increased surface check development as compared with untreated controls. The experiment verified the benefit of presurfacing as a means of reducing surface checking.

54899 Berry, F. H.
SPREAD OF FOMES ANNOSUS ROOT ROT IN THINNED SHORLEAF PINE PLANTATIONS. U. S. Forest Serv. Res. Note NE-87, 4 p. 1968. A99.9 F7622U
Plots were established in thinned shortleaf pine plantations in Missouri to determine the rate of spread of Fomes annosus root rot over a 5-year period. On these plots mortality from F. annosus was about 5 trees per acre per year.

54900 Minore, D.
EFFECTS OF ARTIFICIAL FLOODING ON SEEDLING SURVIVAL AND GROWTH OF SIX NORTHWESTERN TREE SPECIES. U. S. Forest Serv. Res. Note PNW-92, 12 p. Ref. Oct. 1968. A99.9 F7625U

Seedlings of Douglas-fir, Sitka spruce, western hemlock, western redcedar, lodgepole pine, and red alder were inundated in tanks for various lengths of time in both winter and summer. Winter flooding for periods of 1 to 4 weeks severely injured Douglas-fir but had little or no effect on other species. Summer flooding for 4 and 8 weeks affected all six species—many seedlings died, and many formed adventitious roots at the waterline. Western redcedar and lodgepole pine seemed to be the most flood-tolerant species; red alder, Sitka spruce, and western hemlock seemed to be less tolerant; and Douglas-fir was extremely intolerant of flooding.

54901 Bruce, D.
CHARTS FOR DETERMINING SAMPLING RATE AND NUMBER IN SAMPLE. U. S. Forest Serv. Res. Note PNW-97, 6 p. Feb. 1969. A99.9 F7625U

Four charts are presented that show sampling rate and number in sample for different desired levels of accuracy when number in population and coefficient of variation can be estimated.

54902 Fowler, W. B.
A DIGITAL INDICATOR FOR MAXIMUM WIND SPEEDS. U. S. Forest Serv. Res. Note PNW-98, 4 p. Mar. 1969. A99.9 F7625U

A simple device for indicating maximum wind speed during a time interval is described. Use of a uni-junction transistor, for voltage sensing, results in a stable comparison circuit and also reduces overall component requirements. Measurement is presented digitally in 1-mile-per-hour increments over the range of 0-51 m.p.h.

54893 Miller, R. E.
CAN AUGER PLANTING IMPROVE SURVIVAL OF DOUGLAS-FIR SEEDLINGS? U. S. Forest Serv. Res. Note PNW-99, 8 p. Mar. 1969. A99.9 F7625U

Survival and apparent vigor of Douglas-fir seedlings were compared after: (1) hoe planting of root-trimmed seedlings; (2) as above, plus manual site preparation; and (3) auger planting of untrimmed seedlings. After two growing seasons, survival with method (3) but not (2) was significantly greater than survival with method (1). After the third season, survival differences were no longer statistically significant. Survival percentages were 40, 52, and 60 for methods (1), (2), and (3), respectively; and 50, 85, and 87 percent of the survivors were judged healthy. These results are discussed in relation to survival and cost data from other trials of auger versus hoe planting.

54894 Silen, R. R., and Keane, G.
COOLING A DOUGLAS-FIR SEED ORCHARD TO AVOID POLLEN CONTAMINATION. U. S. Forest Serv. Res. Note PNW-101, 10 p. Mar. 1969. A99.9 F7625U

A very cold water spray was used in a Douglas-fir seed orchard to reduce pollen contamination by arresting floral buds in their scales during period of local pollen release. Numbers of pollen grains per cone were thereby reduced from over 1,300 on control plots to a tolerable 100 or less on sprayed plots.

54905 Skolmen, R. G.
PRESERVATIVES EXTEND SERVICE LIFE OF OHIA [METROSIDEROS COLLINA] AND ROBUSTA [EUCALYPTUS ROBUSTA] POSTS. U. S. Forest Serv. Res. Note PSW-171, 2 p. 1968. A99.9 F7652

Posts of ohia and robusta, pressure-treated with two preservatives—chromated copper arsenate and pentachlorophenol, are being tested for durability at the Makiki Exposure Site, Honolulu, Hawaii. All treated posts are still sound after 5 years. Untreated ohia posts averaged 4 years of service life before failing; untreated robusta posts averaged 4 1/2 years.

54906 Walton, G. S.
LOG-NORMAL SPRAY DROP DISTRIBUTION ANALYZED BY TWO NEW COMPUTER PROGRAMS. U. S. Forest Serv. Res. Note PSW-174, 8 p. 1968. A99.9 F7652

Results of U. S. Forest Service research on chemical insecticides suggest that large drops are not as effective as small drops in carrying insecticides to target insects. Two new computer programs have been written to analyze size distribution properties of drops from spray nozzles. Coded in Fortran IV, the programs have been tested on both the CDC 6400 and the IBM 7094 computers. Instructions on their use are included.

54907 Cramer, O. P., and Moltzau, R. H.
WIND INSTRUMENT MOUNTINGS FOR ABOVE THE CAB LOOKOUT EXPOSURE. U. S. Forest Serv. Res. Note PSW-175, 9 p. 1968. A99.9 F7652

The lookout tower offers a ready-made platform from which the speed of true unobstructed wind can be measured, then reduced to equivalent of 20-foot wind. Tower-mounted instruments must meet the requirements of a lightning conductor system, but should also be easily installed and removed for storage and maintenance. Lightweight aluminum mountings for catwalk or flat-roofed installations are described.

54908 Lyon, R. L., and Swain, K. M.
FIELD TEST OF LINDANE AGAINST OVERWINTERING BROODS OF THE WESTERN PINE BEETLE [DENDROCTONUS BREVICORNIS]. U. S. Forest Serv. Res. Note PSW-176, 4 p. Ref. 1968. A99.9 F7652

Ips confusus and D. ponderosae.
The insecticide lindane, applied on bark any time of the year, can effectively destroy broods of the western pine beetle. It may also be effective the year round on the mountain pine beetle, the California five-spined ips, and probably other California species of bark beetles. In tests on the Sierra National Forest, lindane spray formulated at 1.5 percent concentration in diesel oil killed 86.9 to 99.4 percent of western pine beetle broods overwintering in ponderosa pine logs.

- 54899 Hill, M. R., and Amidon, E. L.
INVENTORYING NATIONAL FOREST RESOURCES FOR PLANNING-PROGRAMING-BUDGETING SYSTEM. U. S. Forest Serv. Res. Note PSW-178, 4 p. 1968. A99.9 F7652

New systems for analyzing resource management problems, such as Planning-Programing-Budgeting, will require automated procedures to collect and assemble resource inventory data. A computer-oriented system called Map Information Assembly and Display System developed for this purpose was tested on a National Forest in California. It provided information on eight forest resource systems at an average cost of 0.16 cents per acre. An area the size of a National Forest appears to be the upper limit for the MIADS program.

- 54900 Wick, H. L.
FOREST PRODUCTS HARVESTED IN HAWAII; 1967. U. S. Forest Serv. Res. Note PSW-179, 5 p. 1968. A99.9 F7652

A survey of the primary forest products harvested in Hawaii in 1967 showed a total value of \$334,000, a 24 percent increase over the value in the 1958 survey. Compared with the earlier survey, the volume of sawlogs and treefern harvested has gone up while the volume of fuelwood and posts harvested has declined.

- 54901 Amidon, E. L., and Elsner, G. H.
DELINEATING LANDSCAPE VIEW AREAS; A COMPUTER APPROACH. U. S. Forest Serv. Res. Note PSW-180, 5 p. 1968. A99.9 F7652

Forest scenery.
The terrain visible from a given point can be determined quickly and efficiently by a computer. A FORTRAN subprogram called VIEWIT has been developed for this purpose. Input consists of data on elevations, by coordinates, which can be obtained from maps or aerial photos. The computer will produce an overlay that shows the maximum area visible from the observation point. Both the observation point and the length of line-of-sight are variable. This new technique makes it unnecessary to draw overlays manually.

PRELIMINARY EVALUATION OF SMALL-DIAMETER BLACK HILLS PONDEROSA PINE FOR VENEER AND PLYWOOD. U. S. Forest Serv. Res. Note RM-117, 11 p. 1968. A99.9 F7632Us

Logs 8 to 15 inches in diameter produced veneer suitable for sheathing-grade plywood. Veneer cutting and drying presented no particular problems.

- 54904 Gary, H. L.
SOIL TEMPERATURES UNDER FOREST AND GRASSLAND COVER TYPES IN NORTHERN NEW MEXICO. U. S. Forest Serv. Res. Note RM-118, 11 p., map. 1968. A99.9 F7632Us

Temperatures for selected soil depth (1.5 to 112 inches) under aspen, Douglas-fir, spruce-fir and grassland types on north- and south-facing aspects from 9,900 to 11,150 feet above m.s.l. are reported for 1 year. Plant cover type was more important in modifying soil temperature than aspect, elevation, or snow cover. Average annual temperature for the first 12 inches of soil ranged from 33.2°F. on the north-aspect spruce-fir at 11,150 feet to 40.8°F. on the south-aspect aspen at 9,900 feet. Depth of freezing temperatures during the period of snow cover ranged from 1.5 to 3 feet.

- 54905 Pearson, H. A.
THINNING, CLEARCUTTING, AND RESEEDING AFFECT DEER AND ELK USE OF PONDEROSA PINE [PINUS PONDEROSA] FORESTS IN ARIZONA. U. S. Forest Serv. Res. Note RM-119, 4 p., map. 1968. A99.9 F7632Us

Logging or slash disposal after thinning may decrease deer but increase elk populations. Deer and elk did not significantly affect forage utilization measurements.

- 54906 Gottfried, G. J., and Campbell, C. J.
A SHIELDED THERMISTOR PROBE WITH PORTABLE INSTRUMENT FOR MEASURING SNOWPACK TEMPERATURES. U. S. Forest Serv. Res. Note RM-120, 3 p. 1968. A99.9 F7632Us

A phenol-resin-based shield has been designed to protect a thermistor probe that can be inserted into a snowpack. The shield also serves as an insulator between the thermistor and the aluminum pole used to probe assembly into the snowpack. With the probe and Wheatstone bridge circuit, temperatures can be measured within the snowpack to 0.1°C.

- 54907 Mace, A. C.
EFFECTS OF SOIL FREEZING ON WATER YIELDS. U. S. Forest Serv. Res. Note RM-121, 4 p. Ref. 1968. A99.9 F7632Us

Concrete and granular types of soil freezing in the White Mountains of Arizona influence the disposition of snowmelt water. Concrete frost occurs in the open grassland areas, and appears to increase surface runoff. Only granular frost occurs in the timber types, and appears to decrease surface runoff and increase soil moisture recharge. Concrete freezing causes increased soil moisture and reduced bulk densities in the zone of freezing, whereas granular freezing has no effect on these properties.

- 54908 McKnight, M. E.
THE 24-INCH BRANCH AS A SAMPLE UNIT FOR EGG MASS SURVEYS OF THE WESTERN BUDWORM. U. S. Forest Serv. Res. Note RM-122, 2 p. 1968. A99.9 F7632Us

Estimates of the density of western budworm (*Choristoneura occidentalis* Freeman) egg masses on needles of Douglas-fir are not different on a 24-inch branch sample and the conventional half-branch sample. The smaller 24-inch branch sample is gathered by a small field crew using a pole pruner. The foliage can be gathered in one-third the time and examined in the laboratory in half the time required for half-branch samples.

- 54909 Clary, W. P., Fiolliott, P. F., and Jameson, D. A.
RELATIONSHIP OF DIFFERENT FOREST FLOOR LAYERS TO HERBAGE PRODUCTION. U. S. Forest Serv. Res. Note RM-123, 3 p. Ref. 1968. A99.9 F7632Us

Chiefly grasses.
Herbage production decreases as individual layers and total depth of ponderosa pine forest floor increases. The H layer or total depth of the forest floor accounts for more variation in herbage production than the L or F layers. Management practices which remove only the L and F layers of the forest floor cannot be expected to increase herbage production appreciably.

- 54910 Fiolliott, P. F., and Hansen, E. A.
OBSERVATIONS OF SNOWPACK ACCUMULATION, MELT, AND RUNOFF ON A SMALL ARIZONA WATERSHED. U. S. Forest Serv. Res. Note RM-124, 7 p. Ref. 1968. A99.9 F7632Us

Intensive measurements of snow and streamflow on a 425-acre ponderosa pine watershed indicated that more than 90 percent of the snowpack left the watershed as runoff. Snow accumulation was inversely related to forest density, which indicates a possible opportunity for increasing snow accumulation through more intensive forest management.

- 54911 Chansler, J. F.
DOUGLAS-FIR BEETLE BROOD DENSITIES AND INFESTATION TRENDS ON A NEW MEXICO STUDY AREA. U. S. Forest Serv. Res. Note RM-125, 4 p. 1968. A99.9 F7632Us

Dendroctonus pseudotsugae on *Pseudotsuga menziesii*.

The density of callow adult beetles before flight is a good indicator of the trend an infestation will take. It should be possible to devise a systematic sampling system to determine adult numbers that would enable the entomologist to predict infestation trends quite accurately.

- 54912 Yerkes, V. P., and Markstrom, D. C.
COMPOSTING PONDEROSA PINE BARK; EFFECTS OF NITROGEN ADDITION AND AERATION. U. S. Forest Serv. Res. Note RM-126, 4 p. Ref. 1968. A99.9 F7632Us

Composting of ponderosa pine bark for 9 weeks resulted in a product with a disappearing bark structure, a darkened color, and an "earthy" odor. The addition of nitrogen and aeration speeded up the composting process.

54913 Ffolliott, P. F., Clary, W. P., and Davis, J. R. SOME CHARACTERISTICS OF THE FOREST FLOOR UNDER PONDEROSA PINE [PINUS PONDEROSA] IN ARIZONA. U. S. Forest Serv. Res. Note RM-127,4 p. Ref. 1968. A99.9 F7632Us

Timber basal area was the only stand or site variable tested that was significantly related to amounts of individual layers or total forest floor. Frequency distributions of forest floor depths were developed to be used as a management tool when critical ranges of depths affecting wildland products are defined.

54914 Shoulders, E., and Terry, T. A. CLIMATE AT THE SEED SOURCE AFFECTS LONGLEAF PINE [PINUS PALUSTRIS] PERFORMANCE IN LOUISIANA PLANTATION. U. S. Forest Serv. Res. Note SO-78,5 p.-folder, map. Ref. 1968. A99.9 F7628U

Survivals at 5 and 10 years were correlated with mean annual temperature at the seed source. Height growth was associated with early-season rainfall at the seed source.

54915 Jorgensen, J. R. ROOT GROWTH OF DIRECT-SEEDED SOUTHERN PINE SEEDLINGS. U. S. Forest Serv. Res. Note SO-79,7 p. 1968. A99.9 F7628U

Root development of direct-seeded loblolly, longleaf, and slash pines was influenced by soil texture and structure during the first summer of growth. Plants in the field had root systems much different than reported for seedlings in greenhouses or nurseries.

54916 Schmidting, R. C., and Scarbrough, N. M. GRAPHIC ANALYSIS OF ERAMBERT'S HYBRID. U. S. Forest Serv. Res. Note SO-80,3 p. 1968. A99.9 F7628U

The variability of progeny in needle length, fascicle sheath length, and number of stomates per row per centimeter indicates that Erambert's hybrid is a cross between longleaf and loblolly, Sonderegger pine. The analysis described should help identify other southern pine hybrids.

54917 Williston, H. L. CLEARCUTTING AND PLANTING BEST FOR REGENERATING PINE IN NORTHERN MISSISSIPPI STUDY. U. S. Forest Serv. Res. Note SO-81,5 p. 1968. A99.9 F7628U

Areas that had been clearcut of shortleaf and planted with loblolly pine were 58 percent stocked with dominant pines 10 years later. Satisfactory reproduction was not obtained after seed-tree, shelterwood, or selection cuttings. Board-foot growth (B) and cubic-foot growth (C) of residual trees during the 10 years after cutting were related to residual basal area (X) with the equations: $B = 5.26 X + 18$ and $C = 0.73 X + 2.2$.

54918 Johnson, R. L. THINNING IMPROVES GROWTH IN STAGNATED SWEETGUM [LIQUIDAMBAR STRYACIFLUA] STANDS. U. S. Forest Serv. Res. Note SO-82,5 p. 1968. A99.9 F7628U

Thinning in small (average d.b.h. 10 inches) but old sweetgum stands forestalled mortality and stimulated growth of some residuals. From a starting basal area of about 120 square feet per acre, selective thinning to approximately 70 square feet maximized cubic-foot growth over a 10-year period. Thinning to about 90 square feet gave equivalent total growth but the poorest growth rate per tree. Thinning to about 55 square feet gave the most growth per tree, but left too few trees to utilize the site fully.

54919 Snyder, E. B., and Allen, R. M. MOUNTAIN LONGLEAF PINE [PINUS PALUSTRIS] EXCELS ONLY IN LOCAL PLANTINGS. U. S. Forest Serv. Res. Note SO-83,4 p. Ref. 1968. A99.9 F7628U

In reciprocal plantings of longleaf pine from the mountains of Alabama and the Gulf Coastal Plain in southern Mississippi, Alabama sources outperformed Mississippi sources only in the mountains.

54920 Mesavage, C. REVISED CALCULATOR FOR BARR AND STROUD DENDROMETERS. U. S. Forest Serv. Res. Note SO-84,4 p. 1968. A99.9 F7628U

With pasted-on scales, a slide rule can be used to field-check readings made with all models of Barr and Stroud dendrometers.

54921 Wakeley, P. C. REPLACEMENT PLANTING OF SOUTHERN PINES UNSUCCESSFUL. U. S. Forest Serv. Res. Note SO-85,4 p. 1968. A99.9 F7628U

Growth of *Pinus elliotii*, *P. taeda* and *P. palustris*. Three decades' survival and growth of replacements planted at stand age 1 or 2 years were far inferior to those of the original trees. This was true regardless of plantation spacing, percentage of fall spots, or intensity of thinning.

54922 Boyer, W. D. FOLIAGE WEIGHT AND STEM GROWTH OF LONGLEAF PINE [PINUS PALUSTRIS]. U. S. Forest Serv. Res. Note SO-86,2 p. 1968. A99.9 F7628U

Determination of photosynthetic efficiency. In 45- to 60-year-old stands with densities ranging from nine to 47 trees per acre, an average of 13.2 cubic feet of wood per year was produced per thousand pounds of new needles.

54923 Hallock, H. SAWING TO REDUCE WARP OF LODGEPOLE PINE [PINUS CONTORTA] STUDS. U. S. Forest Serv. Res. Paper FPL-102,31 p. Ref. Mar. 1969. A99.9 F7634U

An evaluation of the relation of sawing methods, log position in tree, eccentricity, position of stud in 2- by 4-inch studs of lodgepole pine.

54924 Clark, J. W. NATURAL DECAY RESISTANCE OF FIFTEEN EXOTIC WOODS IMPORTED FOR EXTERIOR USE. U. S. Forest Serv. Res. Paper FPL-103,5 p. Mar. 1969. A99.9 F7634U

Polyporus versicolor, *Poria monticola*, and *Lenzites trabea*.

Fifteen species of exotic woods, mostly tropical, with good service reputations were comparatively evaluated for resistance to decay organisms by soilblock tests, and 12 of the species were evaluated by field stake tests. Results indicated that wallaba, ekki, and jarrah were very resistant; African oak was resistant; Liberian pine, ohia, parinarium, wishmore, and robusta and saligna eucalyptus were moderately resistant. Two species, kokrodua and Australian toon, were resistant in laboratory tests but only moderately resistant in field tests.

54925 Koelling, M. R., Blum, B. M., and Gibbs, C. B. A SUMMARY AND EVALUATION OF RESEARCH ON THE USE OF PLASTIC TUBING IN MAPLE SAP PRODUCTION. U. S. Forest Serv. Res. Paper NE-116,12 p. 1968. A99.9 F7622Un

Acer saccharum. This summary of research results includes comparisons of vented and unvented tubing lines, the use of vacuum pumping, and a discussion of the advantages and disadvantages of several methods of installing yields up to 40 percent over vented lines when stilled in an aerial system, and (2) that yield increases of over 300 percent are possible when artificial vacuum is applied to unvented lines.

54926 Houston, D. R., and Eno, H. G. USE OF SOIL FUMIGANTS TO CONTROL SPREAD OF FOMES ANNOBUS. U. S. Forest Serv. Res. Paper NE-123,23 p. 1969. A99.9 F7622Un

Bibliography, p.23. Controlling the underground spread of *Fomes annosus*, a serious root rot pathogen of most conifers, is a problem now facing many foresters and other woodland managers. This paper describes the techniques used and the results obtained in several studies made to evaluate soil fumigation as a possible control technique.

54927 Mead, W. J., and Hamilton, T. E. COMPETITION FOR FEDERAL TIMBER IN THE PACIFIC NORTHWEST; AN ANALYSIS OF FOREST SERVICE AND BUREAU OF LAND MANAGEMENT TIMBER SALES. U. S. Forest Serv. Res. Paper PNW-64, 63 p. 1968. A99.9 F7625Un

Forest Service and Bureau of Land Management timber sales in Oregon and Washington showed that competition, defined as the ratio between bid price and appraised price, was significantly affected by number of bidders, size of purchaser, sale size and road construction requirements, and the size of the average appraised price. Lumber prices and the level of housing starts were found to be important in explaining the size of the bid-appraisal ratio.

Trade Act and its history of performance are presented.
Use of the Webb Act by west coast wood products indus-
tries is discussed in detail. Webb-Pomerene Associa-
tions should be considered by firms interested in export
trade. Requirements for success of such an association
are discussed.

NITROGEN ENRICHMENT OF TWO FOREST
ECOSYSTEMS BY RED ALDER [ALNUS RUBRA]. U. S.
Forest Serv. Res. Paper PNW-76,8 p. Ref. 1969.
A99.9 F7625Unl
K. C. Lu, W. B. Bollen, and J. F. Franklin,
joint authors.
Nitrogen content and total weight of litterfall
were determined seasonally over 3 years in 40-year-
old coastal Oregon forests of pure conifer (Douglas-fir,
western hemlock, Sitka spruce), pure alder, and a mix-
ture of the conifers and alder. Either in pure stand or as
an ad-mixture with conifers, red alder led to about a
threefold increase in the amount of nitrogen circulating
in litterfall.

AN EVALUATION OF SEEDING RANGELAND
WITH PELLETS. U. S. Forest Serv. Res. Paper RM-45,
28 p. Ref. 1969. A99.9 F7632U
G. T. Turner, H. W. Springfield, and E. H.
Reid, joint authors.
Earthen pellets containing seeds were tested
for seeding rangelands in Arizona, New Mexico, and
Colorado, 1963-65. Laboratory and greenhouse tests
showed that pellets containing small seeds retained
viability when properly handled; large seeds were
damaged by pelleting process. Field-plot trials
and aerial seedings showed that some seedlings developed
from seedings made with pellets but seedling stands
were more sparse than from methods usually used.

THE GASTON FIRE. U. S. Forest Serv. Res.
Paper SE-43,36 p., map. Dec. 1968. A99.9 F7623U
On April 1 and 2, 1966, the Gaston Fire burned
7,400 acres in the sandhills, 20 miles south of Columbia,
South Carolina. The fire, an intense, fast-moving con-
flagration, occurred during one of the worst fire periods
in South Carolina's history.
This paper presents data on fuels, fire be-
havior, weather, control activities, and fire effects col-
lected at the fire site by a team of scientists from the
Southern Forest Fire Laboratory. Also included is a
brief account of the meteorological events which pro-
duced the drought and the severe burning conditions en-
countered.

COMPRESSIVE AND SHEAR PROPERTIES OF
POLYAMIDE HONEYCOMB CORE. U. S. Forest Serv.
Res. Note FPL-0202, 14 p. Jan. 1969. A99.9 F7634Unl
Wisconsin University, cooperating.
For aircraft construction.
Polyamide honeycomb cores, prepared from
resin-treated polyamide paper to densities of 1.5 and
3 p.c.f. (pounds per cubic foot), were evaluated in com-
pression and shear. Properties determined will enable
structural engineers to arrive at rational designs of
sandwich constructions using these cores.
Compressive strengths at 75°F. were 100
p.s.i. (pounds per square inch) for the 1.5 p.c.f. core and
320 p.s.i. for the 3 p.c.f. core. At 500°F. compressive
strengths were 55 percent of those at 75°F. for the 1.5
p.c.f. core and 40 percent for the 3 p.c.f. core.
At 75°F. shear strengths parallel to the core
ribbon direction were 60 and 170 p.s.i. for the respective
cores, with values of 40 and 95 p.s.i. perpendicular to
the core ribbon direction.

MANAGING EASTERN REDCEDAR [JUNIPER-
US VIRGINIANA]. U. S. Forest Serv. Res. Paper SO-37,
14 p., map. Ref. 1968. A99.9 F7628Us
E. R. Lawson, W. R. Maple, and C. Mesavage,
joint authors.
Previous research and the results of recent
studies in Arkansas indicate that eastern redcedar
should be favored on many areas where growth of trees
of other species is poor. Planting is feasible, and red-
cedar responds well to release and thinning.

KANSAS WOODLANDS. U. S. Forest Serv. Re-
sour. Bull. NC-4,51 p., map. 1968. ASD11A35
The report presents statistics on area, volume,
growth, mortality, and timber use. Projections of ex-
pected timber volumes 30 years in the future are also
presented. These data are discussed with regard to pos-
sible future development and use of the State's woodlands.

PLANTATION TIMBER ON THE ISLAND OF
OAHU, 1966. U. S. Forest Serv. Resour. Bull. PSW-10,
52 p. 1968. ASD11A3
This report summarizes the results of an in-
ventory of timber in planted forests on the Island of
Oahu. It provides information on (1) location and acreage
of each planted stand, (2) species composition and age,
(3) timber volume and quality, and (4) ownership. This
information supplements that of the initial Forest Survey.

SOUTHERN PULPWOOD PRODUCTION, 1967.
U. S. Forest Serv. Resour. Bull. SE-11,23 p., map. 1968.
A99.9 F7623Ub
Pulpwood production in the South leveled off
slightly in 1967 but still established another record high
of 33,651,100 cords—63 percent of the Nation's total.
Significant gains were noted in the use of residues,
whereas roundwood production showed a slight decrease
for the first time in 10 years. At the year's end, there
were 92 mills in operation in the South with a total daily
pulping capacity exceeding 70,000 tons, and eight new
mills now under construction will boost the total daily
capacity by 5,300 tons. Eight mills outside the region
also used wood harvested in the South in 1967.

MARKETING WOODY ORNAMENTALS; PRACTICES AND TRENDS OF NURSERIES IN THE SOUTH. S. Coop. Ser. 143, 62 p., map. Apr. 1969. 100 G29S0
Agricultural Experiment Stations of Alabama, Florida, Georgia, Kentucky, Mississippi, South Carolina, Texas, and Virginia; and, U. S. D. A., cooperating.

STATE AGRICULTURAL EXTENSION SERVICE
PUBLICATIONS

Publications issued by the State Agricultural Extension Service are usually available from the issuing extension service, except where noted, and as long as the supply lasts. The National Agricultural Library does not distribute them.

Reproductions of material not available from the various State institutions may be ordered at regular Library rates from the United States Department of Agriculture, National Agricultural Library, Photoduplication Section, Beltsville, Md., 20705.

CALIFORNIA University, Agricultural Extension
Service, Berkeley

- 55150 Carpenter, G. A.
ECONOMIC TRENDS FACING THE LIVESTOCK
AND MEAT INDUSTRY IN THE NEXT DECADE. Berkeley,
1968. 15 p. HD9415.C3
Chiefly marketing and its influences.
- 55151 Carpenter, G. A.
THE ROLE OF BARGAINING ASSOCIATIONS IN
AGRICULTURE. Berkeley, 1968. 8 p. HD1484.C3
- 55152 Carpenter, G. A.
TOOLS TO IMPROVE BARGAINING STRENGTH
IN AGRICULTURE. Berkeley, 1968. 7 p. S572.C3
Cooperatives and their options.

English summary, p. 12.
Construction of systems.

ENTOMOLOGY

Contains references chiefly on general entomology, and taxonomic and geographic entomology. Some references on pests of crops and products are included in the Bibliography, but for more detailed coverage of the literature on pests and their control, consult the Pesticides Documentation Bulletin, a biweekly publication of the National Agricultural Library.

NATIONAL AGRICULTURAL LIBRARY
U.S. DEPARTMENT OF AGRICULTURE

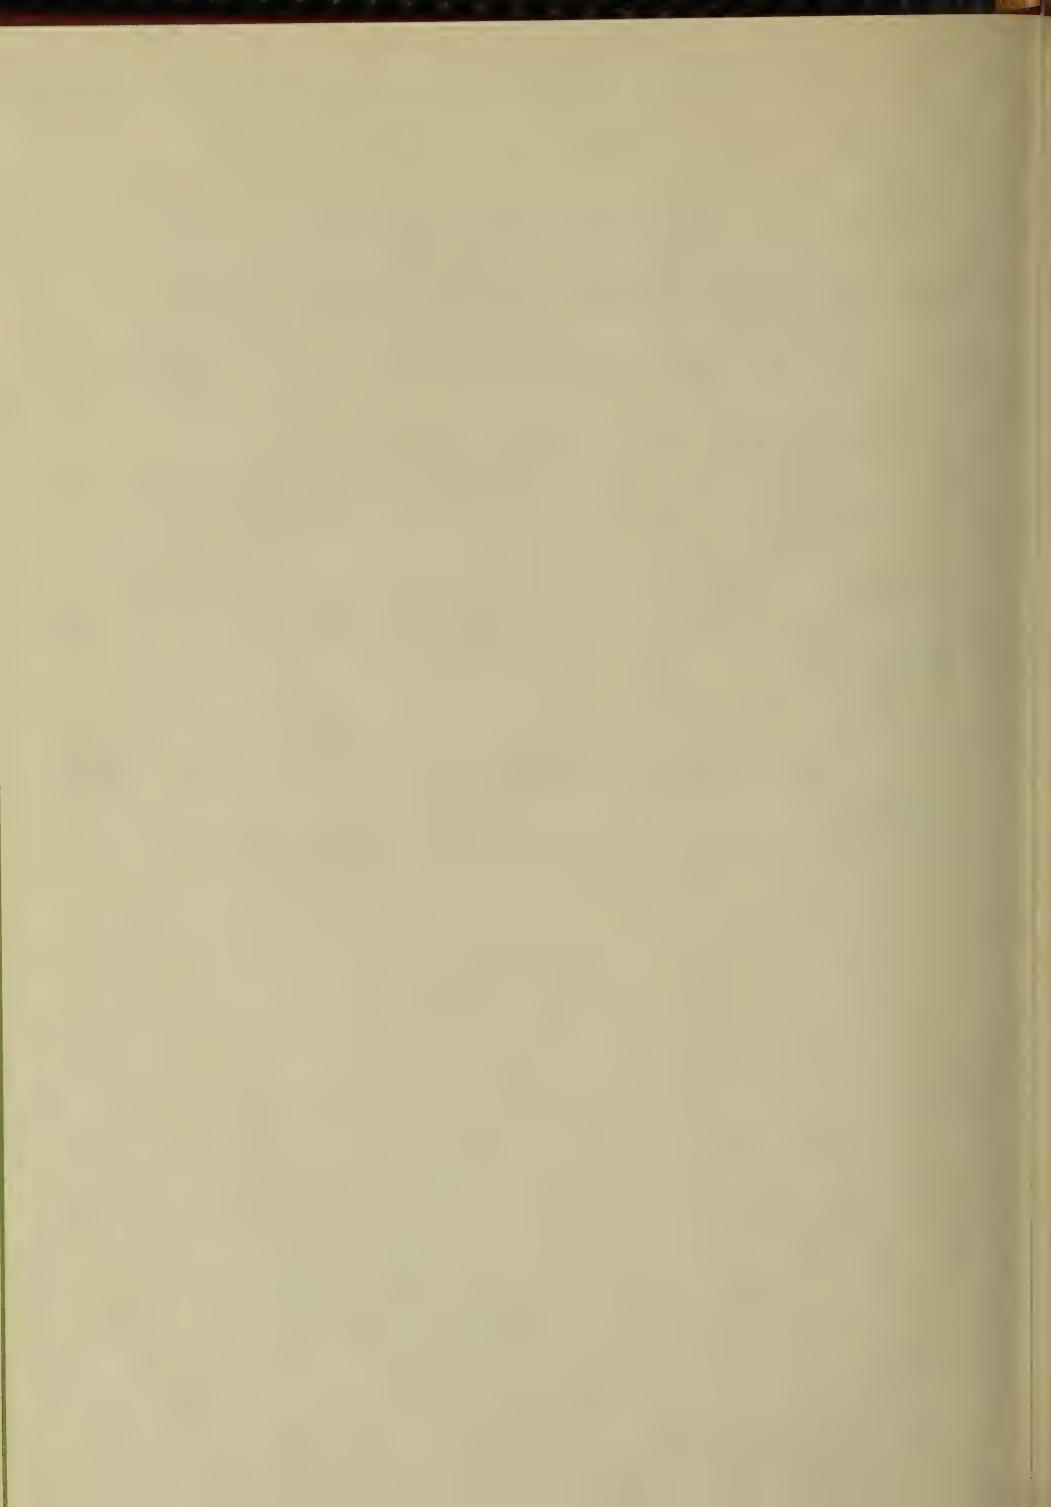

ANNOUNCEMENT

The subject index to this issue of the Bibliography of Agriculture was prepared by permuting the subject entries originally assigned to each citation.

The purpose of permuting the entries was to obtain additional points of access to the information and to increase the specificity of information under each entry.

The above action is one more instance of the use of computers to increase the accessibility of information in the National Agricultural Library.

BIBLIOGRAPHY OF AGRICULTURE

Vol. 33

October 1969

No. 10

The Bibliography of Agriculture is an index to the literature of agriculture and the allied sciences received in the National Agricultural Library. Publications from any country are indexed, provided they are in one of the languages shown in CAPITALS at top of next column, or have summaries, abstracts, or translated titles in one of those languages.

Literature received more than one year after publication is generally not indexed. Exceptions are made for important scientific publications.

Indexing of articles on the processing of agricultural products is limited to those on primary processing.

Unsigned articles and those signed with pseudonyms or initials, editorials, letters to the editor, and columns appearing regularly, are omitted.

For more detailed coverage of the literature on pests and their control, please consult the Pesticides Documentation Bulletin, a biweekly publication of the National Agricultural Library.

FORMAT

The Bibliography is a classified arrangement of references under the following subjects:

- USDA Publications
- State Agricultural Experiment Station Publications
- State Agricultural Extension Service Publications
- Agricultural Economics and Rural Sociology
- Agricultural Products
- Animal Industry
- Engineering
- Entomology
- Food and Human Nutrition
- Forestry
- Plant Science
- Soils and Fertilizers
- Miscellaneous

The classified section is followed by the listing of:

- New Periodicals and Serials
- Translations
- Food and Agriculture Organization of the United Nations (FAO) Publications

The last section of each monthly issue, except November, is the Author and Subject Index for that issue.

For monographs the title is shown in the original language, followed by the English version. Titles of foreign language articles in serial publications are given in English only; the language of the text is shown in abbreviated form in parentheses at the end of the title. The following notations are used:

(Af)	Afrikaans	(Ic)	Icelandic
(Al)	Albanian	(In)	Indonesian
(Ara)	Arabic	(It)	ITALIAN
(Arm)	Armenian	(Ja)	JAPANESE
(Az)	Azerbaijani	(Ka)	Kazakh
(Be)	Belorussian	(Ko)	KOREAN
(Bu)	Bulgarian	(La)	Latvian
(Bur)	Burmese	(Li)	Lithuanian
(Ch)	CHINESE	(No)	Norwegian
(Cz)	CZECH	(Pe)	Persian
(Da)	Danish	(Pol)	POLISH
(Du)	DUTCH	(Por)	PORTUGUESE
(Es)	Estonian	(Rum)	Rumanian
(Fi)	Finnish	(Rus)	RUSSIAN
(Fl)	Flemish	(Se)	SERBO-CROATIAN
(Fr)	FRENCH	(Si)	Siamese
(Ge)	GERMAN	(Sl)	Slovenian
(Geo)	Georgian	(Sp)	SPANISH
(Gre)	GREEK	(Sw)	Swedish
(He)	Hebrew	(Ta)	Tadzhik
		(Tu)	TURKISH
(Hu)	HUNGARIAN	(Uk)	UKRAINIAN

Abbreviated names of the publications cited prior to July 1, 1964 are those from USDA Miscellaneous Publication 765-List of Serials Currently Received in the Library of the United States Department of Agriculture, July 1, 1957. Abbreviated names of all new periodical titles received after July 1, 1964, are taken from the American Standard for Periodical Title Abbreviations. As time allows, abbreviations set up for titles before that date will be converted to the new form.

The presence of the term "Ref." in the citation indicates that the article contains ten or more references to the literature.

Following each citation is the Library classification number which should be used when requesting loans or reproduction of articles.

FREQUENCY OF PUBLICATION

The Bibliography is published monthly. The December issue is devoted wholly to a subject index and the cumulated Personal and Organizational Index to the preceding eleven issues.

AVAILABILITY OF REFERENCES CITED

Loans

Most of the material in the National Agricultural Library collection may be borrowed by employees of the Department of Agriculture and by other libraries. In requesting loans, please include the library call number found at the end of the citation. Loan of periodicals is restricted to the Washington, D. C. area. Foreign statistical publications and rare books are loaned only by special arrangement.

Free Distribution

U.S.D.A. publications. Domestic requests for publications of the United States Department of Agriculture will be filled free to libraries and other qualified agencies and organizations, as long as the supply lasts. (For ordering information, see Checklist of U.S.D.A. Publications in this issue.) Foreign institutions, organizations and agencies which issue publications may obtain U.S.D.A. publications in exchange by writing to the United States Department of Agriculture, National Agricultural Library, Exchange Section, Beltsville, Md., 20705.

State Agricultural Experiment Station and Extension Service publications. Publications issued by State Agricultural Experiment Stations and Extension Services are available except where noted, and as long as the supply lasts, from the issuing station or service. The National Agricultural Library does not distribute them; however, reproductions are available at regular Library rates.

Technical Reports

Most documents issued by CFSTI (Clearinghouse for Federal Scientific and Technical Information) are also sold by the Clearinghouse, U. S. Department of Commerce, Springfield, Virginia 22151 for \$3.00 per document.

Reproduction

All articles listed may be obtained in microfilm or photoprint form from the United States Department of Agriculture, National Agricultural Library, Photoduplication Section, Beltsville, Md. 20705. Copying charges for each periodical or book are:

MICROFILMS: \$1.00 for each 30 pages or fraction copied from a single article or book.

PHOTOPRINTS: \$1.00 for each 4 pages or fraction copied from a single article or book.

RUSH SERVICE: Will be furnished upon payment of \$1.00 additional for each order.

Payment must accompany the order. Cash, Library coupons, check or money order drawn to the National Agricultural Library, U. S. D. A., are acceptable. Payment for orders originating outside of the United States should be made by international money order or draft on an American bank, or by UNESCO book coupons. Superintendent of Documents coupons and requests to furnish photocopy to be paid from Superintendent of Documents Deposit funds cannot be honored. Credit may be extended only to Government agencies and institutions. Billing address should be indicated.

Library Coupons

National Agricultural Library coupons, valued at \$1.00 each, may be purchased in any quantity.

PLEASE GIVE COMPLETE BIBLIOGRAPHIC INFORMATION (INCLUDING CALL NUMBER)
AS IT APPEARS IN THIS PUBLICATION FOR EACH ITEM REQUESTED.

For sale by the Superintendent of Documents, U. S. Government Printing Office, Washington, D. C., 20402
\$26.50 per year, domestic; \$33.25 per year, foreign. Single copies vary in price.

Use of funds for printing this publication approved by the Director of the Bureau of the Budget (January 3, 1969).

CHECKLISTS

Checklists of publications of the U. S. D. A., State Agricultural Experiment Stations, and State Agricultural Extension Services are prepared for the convenience of those who wish to follow the literature from these sources. Most of these publications are included also in the classified section. All are indexed in the author and subject indexes.
Abstracts are included with citations of U. S. D. A. publications, provided they are brief and are received with the original publication.

U. S. D. A. PUBLICATIONS

Publications in the various United States Department of Agriculture series are listed first, followed by publications issued by the various agencies within the Department, arranged alphabetically by name of agency.

Domestic requests for publications in the various Department series will be filled free to libraries and other qualified agencies and organizations upon application to the United States Department of Agriculture, Office of Information, Washington, D.C., 20250, as long as the supply lasts. They may also be purchased from the Superintendent of Documents, Washington, D.C., 20250.

Domestic requests for most publications issued by the Department will be filled free by the issuing agency, as long as the supply lasts. Requests should be addressed to the United States Department of Agriculture, name of the specific issuing agency, Washington, D.C., 20250.

Foreign governments, institutions and agencies which issue publications, may obtain United States Department of Agriculture publications in exchange by writing to the United States Department of Agriculture, National Agricultural Library, Exchange Section, Beltsville, Maryland, 20705.

For further information about the availability of United States Department of Agriculture publications, consult U.S.D.A. List Number 11, List of Available Publications of the United States Department of Agriculture, obtainable from the United States Department of Agriculture, Office of Information, Washington, D.C., 20250, and for sale by the Superintendent of Documents, Washington, D.C., 20402.

FIRST AID FOR FLOODED HOMES AND
FARMS. U. S. D. A. Agr. Handbook 38, rev., 28 p. Apr.
1969. 1 Ag84Ah
Floods have always plagued mankind. Modern
farms are particularly vulnerable, and no effort should
be spared to protect and rehabilitate them.
This publication is intended to help persons
who have returned to flooded homes and farms and are
clearing, rebuilding, and trying to reduce their losses. It
contains information contributed by the U. S. Department
of Agriculture, by some State agricultural colleges and
universities, and by the U. S. Public Health Service; it
also contains suggestions made by some other Federal
agencies, by the American Red Cross, and by safety
organizations.

A NEW RACE OF STRIPE RUST PATHOGENIC
ON THE WHEAT VARIETY MORO, CI 13740. Plant Dis.
Rep. 53(2):91-93. Feb. 1969. 1.9 P69P
- A new race of stripe rust, *Puccinia striiformis*
West., was identified from *Triticum aestivum* variety
Moro collected at Bonners Ferry, Idaho on July 15, 1968,
and was tentatively designated W-57. The widely used
breeding line PI 178383 was susceptible (RT-2) at a con-
stant 18°C temperature profile. Rieselbeil gave a near
immune reaction and several of the other 44 lines tested
showed resistance.

DETERMINATION OF LEAF SPOT RACES IN
SOUTHERN ILLINOIS STRAWBERRY PLANTINGS. Plant
Dis. Rep. 53(2):94-97. Feb. 1969. 1.9 P69P
- Eight cultivated strawberry (*Fragaria x ananassa*)
varieties varying in susceptibility were inoculated
with 27 isolates of *Ramularia tulasnei* Sacc. obtained
from plantings in southern Illinois. None of the 8 varie-
ties inoculated was immune. On the basis of varietal re-
actions to the fungus, the isolates were divided into six
races. Leaves initiated in the fall of the previous year
appeared to be most susceptible 11 to 12 days after
planting.

MELOIDOGYNE INCOGNITA ACRITA INFEC-
TION FAILURE IN AERIAL PARTS OF COTTON. Plant
Dis. Rep. 53(2):97-99. Feb. 1969. 1.9 P69P
- I explored the possibility of using the aerial
parts of cotton plants for determination of resistance or
susceptibility to the cotton root-knot nematode. All at-
tempts to establish an infection were unsuccessful. The
nematode developed to maturity on the roots of rooted
cuttings.

BLACK RIB OF WILLOWS [SALIX] IN MANITO-
BA AND SASKATCHEWAN. Plant Dis. Rep. 53(2):101-102.
Feb. 1969. 1.9 P69P
- A brief account is given of the history and
geographic distribution of *Ciborinia foliolica* (Cash &
Davidson) Whetzel and *C. wisconsinensis* Batra which are
associated with black rib of willows.

- 62691 Hildebrand, E. M.
RUSSET CRACK; A MENACE TO THE SWEET-POTATO INDUSTRY. III. ROLE OF FUNGI IN THE ROOT-LESION PHASE OF RUSSET CRACK. Plant Dis. Rep. 53 (2):103-107. Feb. 1969. 1.9 P69P
- Isolation experiments demonstrated that soil fungi, especially Rhizoctonia, were always involved in root discoloration injury on Jersey type varieties as well as on the others tested, whether in the presence or absence of russet crack virus.
- Fungus discoloration (Rhizoctoniosis) was eliminated from russet crack-infected roots, as well as from virus-free roots of sweetpotatoes, by growing stem cuttings from tips of sprouts in pasteurized sand or soil. By itself, the root-lesion phase of russet crack is a relatively mild and superficial scab-like lesion. That the soil fungi played a positive role in the root-lesion phase of russet crack was demonstrated by subjecting them to Koch's Postulates or "rules of proof" of disease causation.
- The hot water immersion technique (50°C for 10 minutes) controlled Rhizoctonia, scurf, and Fusarium fungi on the surface of sweetpotato roots. Cephalosporium and other heat-resistant fungi were controlled by increasing the length of the heat treatment from 10 to 18 minutes at 50°C.

FOMES ANNOSUS AND CHEMICAL STUMP TREATMENT IN VIRGINIA; A THREE-YEAR STUDY. Plant Dis. Rep. 53(2):108-110. Feb. 1969. 1.9 P69P
- Pinus taeda.
- Tests (1965-1968) in Virginia showed the effectiveness of borax and urea in preventing stump invasion by Fomes annosus when applied at the time of first thinning. Laboratory cultures of root samples from all treatments indicated more infection was present than indicated by outward signs. Forty-five percent of the "control" stumps sampled proved to be infected, although no sporophores were present.
- 62693 Kraft, J. M.
CHICKPEA; A NEW HOST OF FUSARIUM SOLANI F. SP. PISL. Plant Dis. Rep. 53(2):110-111. Feb. 1969. 1.9 P69P
- Chickpea (Cicer arietinum) was a host of five isolates of Fusarium solani f. sp. pisi. All isolates caused slightly more root rot of peas than of chickpea.
- 62694 Fisher, F. E.
RESISTANCE IN FLORIDA CITRUS TO CEROSPORA CITRI-GRISEA. Plant Dis. Rep. 53(2):112-114. Feb. 1969. 1.9 P69P
- During the past 4 years, 98 commercial cultivars of Citrus, each budded on 4 different rootstocks, and subject to natural infection by Ceroaspera citri-grisea, were rated for incidence of leaf infection and defoliation. Differences in the amount and severity of disease occurred within cultivars of a scion; variations in disease severity were also influenced by the species used for rootstock.

CONTROL OF BARLEY LOOSE SMUT (USTILAGO NUDA) BY A DERIVATIVE OF 1,4-OXATHIN IN SOUTH CAROLINA. Plant Dis. Rep. 53(2):118-120. Ref. Feb. 1969. 1.9 P69P
- Control of loose smut (Ustilago nuda (Jens.) Rostr.) of barley was accomplished in South Carolina by treating seed of three barley varieties with 2,3-dihydro-5-carboxanilido-6-methyl-1,4-oxathin (DCMO), a selective, systemic fungicide, at rates equivalent to 2 and 4 ounces per 100 pounds of seed. No serious phytotoxic effects were observed. No increases in yields or test weights were realized. DCMO had no apparent effect on leaf rust (Puccinia hordei Oth.).
- 62699 Stehman, E. V., and Norton, D. C.
INVASION OF THE HEDYSAREAE BY HETERODERA TRIFOLI. Plant Dis. Rep. 53(2):121-123. Feb. 1969. 1.9 P69P
- In invasion studies, 13 of 17 species of Hedy-sareae were invaded to varying degrees by Heterodera trifolii when artificially inoculated. Extensive invasion of Onobrychis vicifolia occurred, but few cysts were produced. Abundant cyst production occurred only with Aeschynomene virginica. Few cysts were produced in any cultivated member of the Hedsareae.

CONTROL OF MELOIDOGYNE INCOGNITA ON BOXWOOD (BUXUS MICROPHYLLA JAPONICA) WITH NEMATOCIDAL DRENCHES. Plant Dis. Rep. 53(2):128-130. Feb. 1969. 1.9 P69P
- At monthly intervals, I applied three applications of a mixture of methanesulfonic acid, 2,4-dichlorophenyl ester and 1,2-dibromo-3-chloropropane (SD 1897: a mixture of SD 7727 and DBCP); O,O-diethyl O-(p-methylsulfinyl)phenyl phosphorothioate; and ethyl 4-(methylthio)-m-tolyl isopropylphosphoramidate (10 percent granules). All treatments controlled Meloidogyne incognita on Japanese boxwood for 5 months. Three applications of acetylhydroxamic acid, thio-S-methyl O-(N-methylcarbamoyl) ester; 2,3-dihydro-2,2-dimethyl-7-benzofuranyl methylcarbamate; ethyl 4-(methylthio)-m-tolyl isopropylphosphoramidate; and a single application of each material at higher rates (3 X) reduced M. incognita; but populations rapidly increased to damaging levels.
- After 1 month, control of nematodes was complete and lasted for 7 months. It was obtained with a single application of SD 1897 and ethyl 4-(methylthio)-m-tolyl isopropylphosphoramidate granules at high rates.

EFFECT OF SOIL FUMIGATION ON DISEASE CONTROL AND YIELD OF GLADIOLUS IN SOUTHEASTERN NORTH CAROLINA. Plant Dis. Rep. 53(2):132-136. Ref. Feb. 1969. 1.9 P69P
- Broadcast fumigation with methyl bromide at 250 to 300 pounds per acre and a mixture of methyl isothiocyanate and 1,3-dichloropropene (DD-MENCs) at 50 gallons per acre were effective in controlling Fusarium and Stromatinia diseases of gladioli. Both fumigants gave excellent results for control of broadleaf weeds and nutsedge. DD-MENCs at 30 and 40 gallons per acre was beneficial in reducing disease but was not effective for nutsedge control. Planting gladioli corns in double rows, 10 inches apart, does not seem to impair the quality of flower spikes when grown during the spring and summer months in southeastern North Carolina.

MOLDY CARPELS IN DELICIOUS APPLES ON THE GREATER NEW YORK MARKET. Plant Dis. Rep. 53 (2):136-138. Feb. 1969. 1.9 P69P
- Moldy carpels were present in 5.0 percent of "Pacific Northwest" and 29 percent of "Virginia Delicious" apples sampled on the Greater New York market over two marketing seasons, 1966-67 and 1967-68. Incidence of moldy carpels was chiefly due to open calyx tubes in the fruits. *Alternaria tenuis* was isolated from moldy carpels of more than 80 percent of 485 fruits in 1967-68. *Leptosphaeria coniothyrium*, *Rhizopus stolonifer* and *Fusarium* spp. were the next most common isolates. In the same season 2.9 percent of the affected fruits had developed core rots.

A PRELIMINARY STUDY ON THE VARIABILITY OF XANTHOMONAS ORYZAE ON SOME RICE VARIETIES. Plant Dis. Rep. 53(2):145-148. Ref. Feb. 1969. 1.9 P69P
- The reaction produced by nine isolates of *Xanthomonas oryzae* on 20 rice varieties was studied by the multiple pin prick inoculation method at both the seedling and flag-leaf stages. Lesion spread was greater at the flag-leaf stage in all varieties except Chinsurah bore II. Kachstung 21, Lacrosse x Zenith-Nira and Wase aikom 3. Some cases of interaction among isolates and varieties between susceptibility at the seedling and flag-leaf stages were noticed. Differential reaction of the varieties with the isolates could be seen, especially at the seedling stage; this establishes the existence of specialization in pathogenicity in *X. oryzae*.

CONTROL OF BRANCH WILT DISEASE OF GRAPES. Plant Dis. Rep. 53(2):152-153. Feb. 1969. 1.9 P69P
- Hendersonula toruloides*.
In an attempt to find an effective and economical method to control branch wilt disease of grapes, it was found that the removal of diseased parts at 3-4 cm below the diseased area was the best method of control. Three prominent fungicides were ineffective for control of the fungal growth in both field and laboratory tests. A mercuric compound, however, was highly effective as a wound dresser in field trials and greatly inhibited fungal growth in the laboratory.

SOME PRELIMINARY OBSERVATIONS ON CROWN GALL THERAPY WITH CHEMICALS. Plant Dis. Rep. 53(2):155-157. Feb. 1969. 1.9 P69P
- Agrobacterium tumefaciens*.
Fall applications of cyano(methylmercuri) guanidine as a drench accompanying the planting of peach seed reduced the incidence of crown gall. Applications of this same chemical in the spring prevented infection. Copper chelate was less effective, and Terramycin afforded protection only if used in the spring with stratified seed. Terramycin used at a 800 ppm dip gave excellent protection of mazzard rootstocks in spring plantings.
- 62714 Abdou, Y. A., and Fahim, M. M.
A STEMPHYLIUM LEAF SPOT OF VICIA FABA IN THE UNITED ARAB REPUBLIC. Plant Dis. Rep. 53 (2):157-159. Feb. 1969. 1.9 P69P
- Stemphylium botryosum* Walbr. is the cause of a previously unreported disease of field bean (*Vicia faba*) in El-Tahrir Province, U. A. R. Disease symptoms appear in the form of leaf spots, which cause rapid defoliation of diseased plants. The fungus is pathogenic to both introduced "Acquadulce" and local "Giza 2" varieties. Preliminary observations indicated the freedom of Upper Egypt bean-growing areas such as El-Fayom and Ben-Suef Provinces from the disease.

DISEASES OF CORN AND SOYBEANS IN RIO GRANDE DO SUL, BRAZIL IN 1968. Plant Dis. Rep. 53(2):165-168. Feb. 1969. 1.9 P69P
- An extensive study of corn and soybean diseases in Rio Grande do Sul, Brazil revealed the presence of several major diseases of both of these crops. The most important diseases of corn were rust, northern leafblight, and southern leafblight. An unknown disease was prevalent. The most widespread diseases of soybeans were bacterial blight and bacterial pustule. Although these corn and soybean diseases were widespread, they were not often the cause of major yield reductions, very likely because of drought-like weather conditions which prevailed during a major part of the growing season.

COMPOSITION AND FINE STRUCTURE OF COTTON FIBERS GROWN IN CONTROLLED ENVIRONMENTS. U. S. Agr. Res. Serv. ARS-72-70:22-34. May 1969. A381 R31
- Deltapine cotton grown under continuous illumination and at controlled temperatures was harvested at intervals from 20 days after blossoming to boll opening. Fiber maturity and composition, cellulose crystallinity and accessibility, and response to differential dyeing were measured. In open bolls the X-ray crystalline index increased with increasing average daily temperature. Rate of fiber maturation, whether measured by observation under polarized light or by changes in cellulose and sugar content, was temperature-dependent but in a complex manner. Accessibility of the fiber cellulose, as measured by iodine sorption, dye sorption, and enzymatic attack, was very high in young fibers and decreased as the fibers matured. Rate of decrease in accessibility was much lower when bolls had been grown at low temperatures.

EFFECTS OF SUBSTITUENTS AND GEOMETRY OF 4,5-DIHYDROXY-2-IMIDAZOLIDINONE ON REACTIVITY AND ON HYDROLYSIS OF CELLULOSE DERIVATIVES. U. S. Agr. Res. Serv. ARS-72-70:35-40. May 1969. A381 R31
- Cotton.
The 4,5-dihydroxy-2-imidazolidinone system (I), regardless of the substituent in the 1,3-positions, has been known for some time to be an effective crosslinking system for cellulose. The ring hydroxyls and the pendent methyl groups are both capable of reaction under relatively mild crosslinking conditions. Although much has been written about some members of this system, the effects of geometry of the ring hydroxyls and of impurities in the system have received little attention. Some of these effects are discussed as are the properties of the finished fabrics derived from I.

SWELLABILITY OF CROSSLINKED COTTONS. U. S. Agr. Res. Serv. ARS-72-70:66-71. May 1969. A381 R31
- The alkali centrifuge values (ACV's) permit the swellabilities of cotton fibers to be characterized quantitatively in terms of sorption of caustic solution of mercerizing strength. Durable-press cotton samples were evaluated by the alkali swelling centrifuge test. The resultant ACV's emphasized the varied alterations in intrafiber structure that were achieved by crosslinking cottons. In general, crosslinking reduced the swelling capacity of the fibers—by as much as 80 percent in one process. Certain conditions or stages in some treatments produced increased sorptivity. The alterations in ACV were dependent upon various factors in the processes, for example, cross-linking agent, degree of modifications, method of treatment, catalyst, and curing temperature.

ROT RESISTANCE OF COTTON FABRIC TREATED WITH VARIOUS FLAME RETARDANTS. U. S. Agr. Res. Serv. ARS-72-70:76-81. May 1969. A381 R31
- Several durable flame retardant finishes were applied (using either a heat cure or a chemical fixation technique) to three different cotton fabrics at various add-ons, and evaluated for rot resistance. In general, the heat-cured samples afforded better resistance to microorganism attack than the chemically fixed ones. One APO-THPC treated sateen sample with about 30-percent add-on retained over 100 percent breaking strength after three months, and a THPC-MM sample (20-percent add-on) retained 76-percent strength after 3 months. The treated samples having the best rot resistance also offered some protection against acid and had improved dimensional stability.

ELECTROSTATICS, OZONE, AND COTTON. U. S. Agr. Res. Serv. ARS-72-70:139-146. May 1969. A381 R31
- The results of this study show that the cotton fiber properties are not being affected or altered significantly by the exposure to ozone or to the influence of ozone-generating electric field.
- From this limited evaluation, the overall results encourage the application of electrostatics for manipulating cotton fibers in a radically new cotton textile processing system. Of the test result obtained, only the changes in the alkali centrifuge values and the cracks present on the fiber surfaces as seen on the electron microscope photomicrographs give any indication of possible changes of fiber properties. What effect these changes of fiber surface characteristics have on silver or yarn properties or in textile processing remains to be investigated.

Progress is being made in development of
equipment and products by wet processing of alfalfa.
This approach to alfalfa processing is expected to lead
to a wide variety of products including (a) a xanthophyll
concentrate for poultry rations, (b) a protein concen-
trate for poultry and swine rations, (c) a water-soluble
UGF concentrate (e.g. brown juice), (d) a low-cost feed
product (e) for ruminants, and (e) if flavor problems are
solved, a protein isolate for human food.

For over one-third of a century, price support and production adjustment programs have had an important impact on the tobacco industry. The legislation and resulting programs have been modified to meet varying conditions of depression, war, and prosperity. Tobacco allotment programs have been designed and operated to improve prices and incomes to growers by limiting production. CCC program costs for tobacco, including those for exports, have been low in both amount and in relation to the crop value.

EFFECTS OF COMPETITION ON POST-
PLANTING GROWTH OF POTTED WHITE SPRUCE
[PICEA GLAUCA]. Tree Planters' Notes 20(1):19-22.
Ref. Spring 1969. 1.962 C5T71
The experiments showed that the best growth
of the white spruce was achieved at the highest moisture
level, in which pots were cyclically raised to a drip-point
twice weekly and permitted to dry by evapotranspiration
between water additions.
In all experiments the presence of other plants
in a shared environment reduced growth of the white
spruce, showing inhibitory effects of competition. Fac-
tors other than competition for water were involved but
not identified. In the grass roots studies, only the pres-
ence of grass reduced growth of the white spruce, and
inhibitory root exudates were not found.

COMPUTER PROGRAMS FOR WEIGHTING
LENGTH-OF-STAY AND OTHER VISITOR CHARACTER-
ISTICS. U. S. Forest Serv. Res. Note INT-79,12 p. 1968.
A99.9 F764Un
When recreationists of different characteris-
tics have different probabilities of being included in re-
creation surveys, the resulting averages for these charac-
teristics can be severely biased unless special computa-
tional procedures are used. This paper describes the use
of two computer programs for correcting biases that
would otherwise result from (a) differences in length of
stay, (b) known probabilities for sampling each individual,
or (c) the combined effects of a and b.

WESTERN WHITE PINE CONES POLLINATED
WITH 1- TO 3-YEAR-OLD POLLENS GIVE GOOD SEED
YIELDS. U. S. Forest Serv. Res. Note INT-81,3 p. 1968.
A99.9 F764Un
Filed seed yields of Pinus monticola cones
from 55 controlled crosses made with 1- to 5-year-old,
deep-freeze-stored pollens were compared with yields
from other fresh-pollen crosses made on the same trees
in the same pollination seasons. Observations covered
four pollination seasons, and on the average involved
about 11 trees, and 14 stored-pollen and 25 fresh-pollen
crosses thereon, per season. One- to 3-year-old pollens
gave 52 to 110 percent of the yield observed for fresh
pollens, and there was some evidence that 4- and 5-year-
old pollens might also be satisfactory for routine use.

FACTORS THAT AFFECT CHOICE OF SHELVING MATERIALS IN SINGLE-FAMILY HOMES. U. S. Forest Serv. Res. Note INT-83,6 p. 1968. A99.9 F764Un
Survey of homebuilders shows that lumber is predominant material used for shelving in single-family homes but builders have considerable interest in other materials such as particleboard and metal in order to eliminate warp and reduce installation and finishing costs.
- 62828 Philpot, C. W.
MINERAL CONTENT AND PYROLYSIS OF SELECTED PLANT MATERIALS. U. S. Forest Serv. Res. Note INT-84,4 p. 1968. A99.9 F764Un
Recent studies of pyrolysis of plant materials indicate that the rate of thermal degradation and the amount of volatile materials formed are directly related to the silica-free ash content (SFA) of the material. However, plants with SFA above 12 percent that were tested did not fit these relationships. Evidence was found that only certain constituents of SFA are effective in inhibiting pyrolysis.

NATURAL REGENERATION OF DOUGLAS-FIR IN CENTRAL MONTANA. U. S. Forest Serv. Res. Note INT-85,4 p. 1969. A99.9 F764Un
Relations between Douglas-fir regeneration and seedbed surface conditions that influence natural restocking were analyzed. Undisturbed duff produced significantly greater number of seedlings per acre than five of seven seedbeds tested.
- 62830 Bingham, R. T., Wise, K. C., and Wells, S. P.
ABERRANT CONES IN WESTERN WHITE PINE. U. S. Forest Serv. Res. Note INT-86,4 p. 1969. A99.9 F764Un
Two rare cone forms—proliferated and forked—are reported and illustrated for *Pinus monticola*. The latter form may be unique to this species, and may be genetically controlled. In addition, genes controlling the "forked-cone" trait may be linked with recessive genes associated with chlorophyll deficiencies of *P. monticola* foliage.
- 62831 Fowler, W. B.
A DIGITAL TEMPERATURE MONITOR FOR PHOTORECORDING. U. S. Forest Serv. Res. Note PNW-95,7 p. Jan. 1969. A99.9 F7625U
A method of digitizing atmospheric measurements for portrayal with a time-lapse camera is described. A servomechanism rebalances a resistance bridge which has the temperature sensor as an active component. A mechanically coupled encoder determines the proper combination of relay closures which, in turn, causes the temperature to be projected by means of a light bank.
- 62832 Haines, W. H. B.
PULPWOOD PRICES IN THE SOUTHEAST, 1962-1967. U. S. Forest Serv. Res. Note SE-92,2 p. Aug. 1968. A99.9 F7623Un
Average prices paid for both pine and hardwood bolts from all sources increased by about 16 percent between 1962 and 1967—from \$16.55 to \$19.25 per cord for pine, and from \$13.40 to \$15.55 per cord for hardwood. Pine and hardwood chip prices increased by 17 and 22 percent, respectively, over the same period. Except for hardwood bolts, however, increases in pulpwood prices in 1967 were substantially below the increases in 1966.
- 62833 Carpenter, B. E., and Schroeder, J. G.
COMBINED EFFECTS OF DRYING, SURFACING, AND TRIMMING ON GRADE AND VOLUME OF SOUTHERN PINE LUMBER. U. S. Forest Serv. Res. Note SE-93,3 p. Sept. 1968. A99.9 F7623Un
This paper shows how the grade and volume of 1-inch and dimension lumber changed due to drying, surfacing, and remanufacturing during a southern pine lumber yield study.
- 62834 Ike, A. F.
SYMPTOMS OF NUTRIENT DEFICIENCY IN YELLOW-POPLAR [*LIRIODENDRON TULIPIPERA*] SEEDLINGS. U. S. Forest Serv. Res. Note SE-94,4 p. Oct. 1968. A99.9 F7623Un
Visual symptoms are described for leaves of yellow-poplar seedlings supplied N, P, and K in varying concentrations ranging from minimal to excessive. Probability of growth responses to added N is high when tissue levels are below 2 percent; none is likely when they exceed 3 percent.
- 62835 Squillace, A. E., and Gansel, C. R.
ASSESSING THE POTENTIAL OLEORESIN YIELDS OF SLASH PINE [*PINUS ELLIOTTII*] PROGENIES AT JUVENILE AGES. U. S. Forest Serv. Res. Note SE-95,4 p. Oct. 1968. A99.9 F7623Un
The potential oleoresin yields of slash pine progenies can be assessed at juvenile ages, 7 to 8 years earlier than with previous methods. Seeds are sown in peat pots, outplanted shortly after germination at a spacing of 1 1/2 by 3 feet, and given intensive cultural treatment. At 2 1/2 years from seed, when the trees average about 9 feet tall, their potential yields are evaluated by a miniature chipping technique.
- 62836 Knight, H. A.
A PREVIEW OF "SOUTH CAROLINA'S TIMBER, 1968." U. S. Forest Serv. Res. Note SE-96,4 p. Oct. 1968. A99.9 F7623Un
A fourth survey of South Carolina's timber resource shows that over the past 10 years the area of commercial forest land has increased by 4 percent and the volume of growing-stock timber by 19 percent. In 1967, net growth of growing stock exceeded removals by over 200 million cubic feet, or 48 percent.
- 62837 Merkel, E. P.
FIELD SCREENING OF INSECTICIDES FOR CONTROL OF THE PINE SEEDWORM, *LASPYESIA ANARAJADA* MILLER. U. S. Forest Serv. Res. Note SE-97,2 p. Oct. 1968. A99.9 F7623Un
Three insecticides—Gardona, fenthion, and Azodrin, effectively controlled the pine seedworm, *Laspysia anarajada*, on second-year slash pine cones in a field screening test.
- 62838 McClure, J. P.
SECTIONAL ALUMINUM POLES IMPROVE LENGTH MEASUREMENTS IN STANDING TREES. U. S. Forest Serv. Res. Note SE-98,4 p. Nov. 1968. A99.9 F7623Un
The use of sectional aluminum poles to measure lengths in standing trees can reduce bias and improve measurement precision. The method has been tested extensively under a variety of field conditions by Forest Survey crews in the Southeast. Over 16,000 trees with lengths up to 120 feet have been measured over the past 5 years.
- 62839 McClure, J. P.
PREDICTING TREE D. B. H. FROM STUMP MEASUREMENTS IN THE SOUTHEAST. U. S. Forest Serv. Res. Note SE-99,4 p. Dec. 1968. A99.9 F7623Un
When a tree has been cut and only the stump remains as an indicator of tree size, a prediction equation can be used to estimate d.b.h. from stump measurements. An improved equation model was developed from stump measurement data collected by Forest Survey special study crews in North Carolina, Virginia, and South Carolina. Independent samples from Virginia and South Carolina were used to test equations derived from only the North Carolina sample, and a pooled sample of over 14,000 trees was used to compute equation coefficients for 53 southeastern tree species.
- 62840 Webb, C. D., and Farmer, R. E.
SYCAMORE SEED GERMINATION: THE EFFECTS OF PROVENANCE, STRATIFICATION, TEMPERATURE, AND PARENT TREE. U. S. Forest Serv. Res. Note SE-100,6 p. Dec. 1968. A99.9 F7623Un
Various stratification periods and germination temperatures were applied to sycamore seed collected along the Chattahoochee River from north Georgia to west Florida. Results showed that percent and speed of germination were greater for seed from southern than from northern provenances. Percent and speed of germination increased as temperature increased. The interaction of provenance with stratification was significant only for germination speed. When seed were kept separate by parent tree, seed from isolated trees had poorer germination than did seed from trees growing near other sycamores.
- 62841 Fitzinger, C. W., and DeBarr, G. L.
HOW TO DISTINGUISH ATTACKS BY THE BLACK TURPENTINE BEETLE AND DIORYCTRIA AMATELLA ON SOUTHERN PINES. U. S. Forest Serv. Res. Note SE-101,4 p. Jan. 1969. A99.9 F7623Un
Trunk attacks by the black turpentine beetle, *Dendroctonus terebrans* (Oliv.), and the larvae of *Dioryctria amatella* (Hulst) on the southern pines results in a unique flow of pitch. This external pitch mass or pitch tube exhibits characteristics that can be used as symptoms to distinguish between attacks by these two insects.

- 62842 Cooper, R. W.
PRELIMINARY GUIDELINES FOR USING SUPPRESSION FIRES TO CONTROL WILDFIRES IN THE SOUTHEAST. U. S. Forest Serv. Res. Note SE-102, 2 p. Jan. 1969. A99.9 F7623Un
- Suppression firing is defined as the application of fire to speed or strengthen control action on free-burning wildfires. The key to successful suppression firing is availability of personnel knowledgeable in specific application plus an adequate supply of manpower and equipment to contain the set fire. Preliminary guidelines for the use of this fire-control tool are presented for the technologist.
- 62843 Philpot, C. W., and Mutch, R. W.
FLAMMABILITY OF HERBICIDE-TREATED GUAVA FOLIAGE. U. S. Forest Serv. Res. Paper INT-54, 9 p. 1968. A99.9 F764U
- Chemicals and burning to control guava. Guava leaves treated with herbicide were found to be less flammable than untreated green leaves or dead leaves. Differences in flammability were determined by small-scale laboratory fires, differential thermal analysis (DTA), and thermogravimetric analysis (TGA). The herbicide-treated leaves had a higher ash content and a lower ether extractive content. A direct relationship was found between TGA and DTA and actual burning tests. Apparently, the results of microthermal analyses of pyrolytic reactions can be used as an indication of the behavior of the fuel in small-scale burning tests.
- 62844 Benson, R. E.
FACTORS THAT AFFECT THE SINGLE-FAMILY HOME MARKET FOR WOOD WINDOWS. U. S. Forest Serv. Res. Paper INT-55, 13 p., map. 1968. A99.9 F764U
- Nation shows wide geographical variations in window materials used in new single-family homes. Appearance, style, price, and performance influence choice and thus contribute to these variations. Current trends in the new single-family home market, improvements in window materials, and relative prices of aluminum and wood windows are key factors in the market outlook for wood windows.
- 62845 Anderson, H. E.
SUNDANCE FIRE [IDAHO]; AN ANALYSIS OF FIRE PHENOMENA. U. S. Forest Serv. Res. Paper INT-56, 37 p., map. 1968. A99.9 F764U
- The Sundance Fire on September 1, 1967, made a spectacular run of 16 miles in 9 hours and destroyed more than 50,000 acres. This run became the subject of a detailed research analysis of the environmental, topographic, and vegetation variables aimed at reconstructing and describing fire phenomena. This report details the fire's progress; discusses the fire's buildup in intensity, the fuel complex through which it traveled, the wind and other atmospheric variables affecting the fire's behavior; and describes the processes that probably account for the tree breakage and blowdown, the long-range spotting, and the subsidence of the fire's run.
- 62846 Benson, R. E.
FACTORS THAT AFFECT USE OF WOOD SIDING MATERIALS IN SINGLE-FAMILY HOMES. U. S. Forest Serv. Res. Paper INT-57, 10 p., map. 1968. A99.9 F764U
- A survey of builders in 20 cities throughout the Nation shows preferences for siding materials vary regionally. Wood-based sidings are favored for appearance and workability, but are more difficult to maintain than are several other leading nonwood siding materials. The market outlook for wood sidings depends partly on improving maintenance and other performance properties and partly upon the continuing esthetic appeal of wood to home buyers.
- 62847 Leak, W. B., Filip, S. M., and Solomon, D. S.
RATES OF VALUE INCREASE FOR YELLOW BIRCH IN NEW ENGLAND. U. S. Forest Serv. Res. Paper NE-120, 11 p. 1968. A99.9 F7622Un
- Compound interest rates of value increase, over a 10-year period, were computed for yellow birch for a range in vigor class (growth rate), veneer-log and sawlog grades, merchantable height, and d.b.h. An improvement in log grade over the period resulted in moderate to high compound interest rates. Otherwise rates were low. Recommendations on tree marking and choice of optimum harvest size are given, based on grade-improvement potentials.
- 62848 Lucas, J. T., and Wallin, W. B.
THE DEPARTMENT OF DEFENSE MARKET FOR WOODEN PALLETS. 1966. U. S. Forest Serv. Res. Paper NE-122, 19 p., map. 1968. A99.9 F7622Un
- Discusses the 1966 Department of Defense (DOD) market for wooden pallets. Describes the kinds and quantities of pallets needed, when and where pallets are needed, how the pallets are purchased, sources of pallet supply, and pallet prices.
- 62849 Corbett, E. S., and Crouse, R. P.
RAINFALL INTERCEPTION BY ANNUAL GRASS AND CHAPARRAL; LOSSES COMPARED. U. S. Forest Serv. Res. Paper PSW-48, 12 p. Ref. 1968. A99.9 F7652P
- Loss of precipitation due to interception by annual grass and grass litter was measured during three rainy seasons on the San Dimas Experimental Forest, in southern California. Interception loss from annual grass averaged 7-9 percent; that from mature chaparral cover, 12.8 percent. If chaparral stands were converted to grass, an estimated 1.3 inches of gross interception could be saved each year.
- 62850 Litton, R. B.
FOREST LANDSCAPE DESCRIPTION AND INVENTORIES; A BASIS FOR LAND PLANNING AND DESIGN. U. S. Forest Serv. Res. Paper PSW-49, 64 p., map. 1968. A99.9 F7652P
- California University, Department of Landscape Architecture, College of Environmental Design, cooperating.
- Chiefly for recreation. Describes six analytical factors and seven compositional types useful in recognition and description of scenic resources. Illustrates their application in two inventories made to aid managers and landscape architects in planning and design.
- 62851 Smalley, G. W., and Bower, D. R.
VOLUME TABLES AND POINT-SAMPLING FACTORS FOR LOBLOLLY PINES [PINUS TAEDA] IN PLANTATIONS ON ABANDONED FIELDS IN TENNESSEE, ALABAMA, AND GEORGIA HIGHLANDS. U. S. Forest Serv. Res. Paper SO-32, 13 p., map. 1968. A99.9 F7628Us
- Volumes are in cubic feet to tops of 0.0, 2.0, 3.0, and 4.0 inches. Weighted volume equations derived from data on 196 felled trees which equalled or exceeded 5.0 inches d.b.h. are of the form $V(D^2H)-1 = b_1 + b_0(D^2H)-1$. Tables of volumes per square foot of basal area are included.
- 62852 Schmitt, D.
PERFORMANCE OF SOUTHERN PINE HYBRIDS IN SOUTH MISSISSIPPI. U. S. Forest Serv. Res. Paper SO-36, 15 p. Ref. 1968. A99.9 F7628Us
- On the basis of survival and resistance to fusiform rust, three interspecific pine hybrids—longleaf \times slash, shortleaf \times slash, and shortleaf \times loblolly—merit further investigation. Site, cultural conditions, and especially individual seed and pollen parents affected performance. There are good possibilities for improvement by selection of individual parents.
- 62853 Smalley, G. W., and Bower, D. R.
VOLUME TABLES AND POINT-SAMPLING FACTORS FOR SHORTLEAF PINES [PINUS ECHINATA] IN PLANTATIONS ON ABANDONED FIELDS IN TENNESSEE, ALABAMA, AND GEORGIA HIGHLANDS. U. S. Forest Serv. Res. Paper SO-39, 13 p., map. 1968. A99.9 F7628Us
- Volumes are in cubic feet to tops of 0.0, 2.0, 3.0, and 4.0 inches. Weighted volume equations derived from data on 168 felled trees which equalled or exceeded 5.0 inches d.b.h. are of the form $V(D^2H)-1 = b_1 + b_0(D^2H)-1$. Tables of volume per square foot of basal area are included.

STATE AGRICULTURAL EXTENSION SERVICE PUBLICATIONS

Publications issued by the State Agricultural Extension Service are usually available from the issuing extension service, except where noted, and as long as the supply lasts. The National Agricultural Library does not distribute them.

Reproductions of material not available from the various State institutions may be ordered at regular Library rates from the United States Department of Agriculture, National Agricultural Library, Photoduplication Section, Beltsville, Maryland, 20705.
